Text: BOTWORKER to 555-888

What exactly is RPA and bots?

Robotic process automation, or RPA, uses software robots (bots) to automate any business process. RPA enables employees to focus on higher-value work while autonomous multi-skilled software robots tirelessly perform error-free rules-based transactions. Simply put, RPA mimics whatever a human employee can do on a computer, which is why we call it your "Digital Workforce"
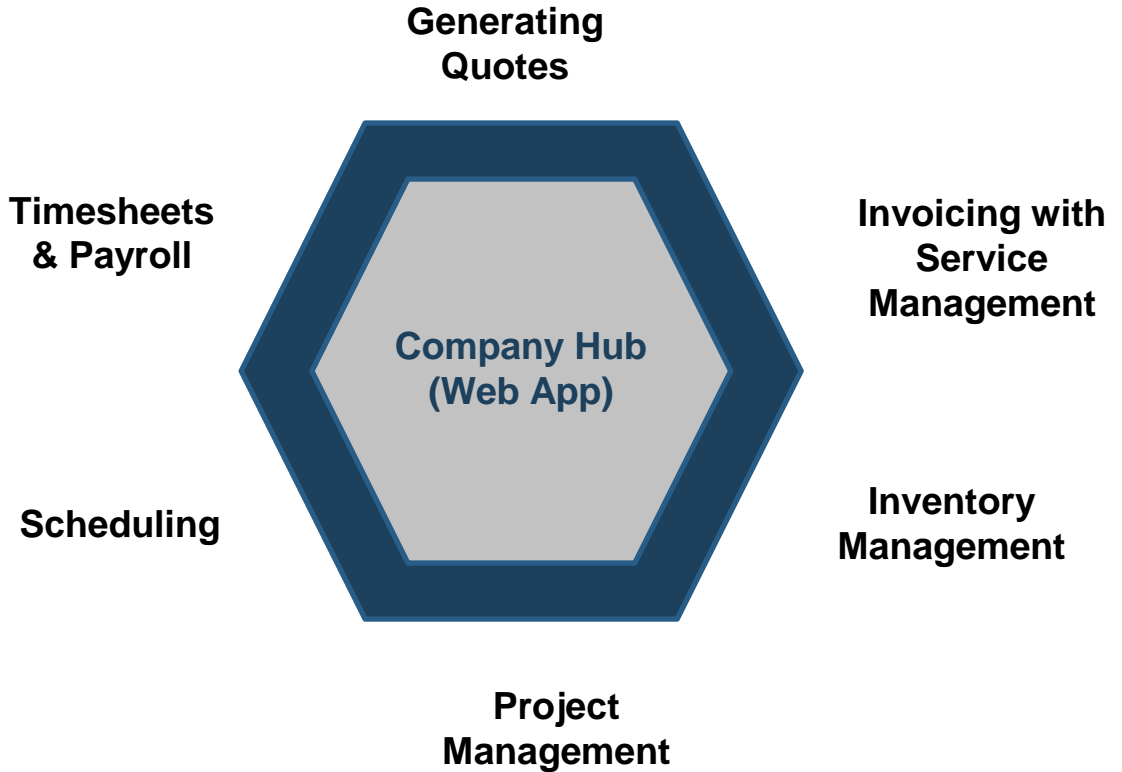

Seeing is Believing
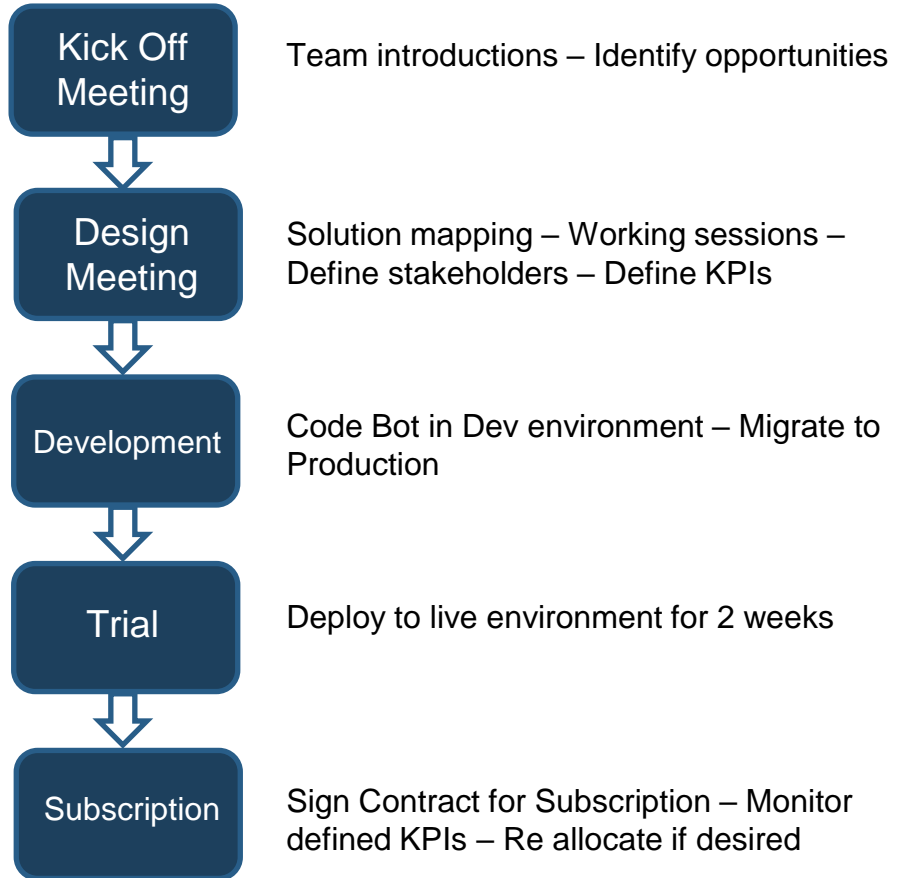

Benefits of Digital Workforce and RPA

- Drastically reduce OPEX
- Quick Deployment Cycles
- Non-invasive deployment
- Increased Accuracy
- Consistency
- Scalability
- 24 x 7 Workforce
- Productivity gains

Your Simple Path to Automation

Kick Off Meeting	Team introductions – Identify opportunities
Design Meeting	Solution mapping – Working sessions – Define stakeholders – Define KPIs
Development	Code Bot in Dev environment – Migrate to Production
Trial	Deploy to live environment for 2 weeks
Subscription	Sign Contract for Subscription – Monitor defined KPIs – Re allocate if desired
