Dramatically Simplify Cloud Data Environments

- Assessment for Azure SQL deployment architecture
- Pre-Migration database readiness assessment
- Migration plan for all data environments (UAT, Test & Dev, Prod)

Empower IT to meet key business KPIs

- Identify key data platform and LOB KPI's.
- Implementation plan for database KPI's for cloud
- Enable multi-geo computing to meet HA and DR SLAs

Achieve Data Governance and Compliance

- Enforce granular control with role base access control
- Multi layered security with live auditing/reporting.
- Best Practices.

Supported Environments:

Amazon Web Service

Microsoft Azure

Containers

Kubernetes Cluster

Datasheet

Unified Microsoft Data Platform – Consulting Services

Expert led Consulting Services | Remote | 3 weeks | RFP/Review/Design

Data Platform and Business Intelligence environment architecture, optimization, security and resiliency is a critical aspect for every organization. Our Data and BI experts, previously with product companies including Microsoft, Oracle, NetApp, etc. have provided cost-effective, secure, high performance, scalable, long lasting solutions to various organizations (Government, Defense, Private sector, Non-profits) across regions and industry segments for their data, analytics and reporting requirements.

Drootoo believes in a unified approach to solve the challenges of data sprawl, data swamps and disconnected silos of data and applications. As one of the fastest growing unified and distributed cloud solutions provider, our industry leading and awarded innovations can help unify data and insights for organizational success, especially in these challenging times.

Our expert led consulting services covers the entire spectrum of Microsoft data platform products, especially, SQL Server, Azure SQL Database, Power BI Business Intelligence, Integration Services ETL, Reporting Services reports, and AI, ML and related products and services. These include all supported features, including high availability via clusters or Always On, Disaster Recovery and other enterprise grade high performance, security and resiliency options. For Business Intelligence, fully integrated dashboard and reporting solutions scale from departmental MIS to stream insights for IOT. It spans all environments from on-premises to hybrid or fully public cloud native implementations along with the attendant infrastructure, where needed.

Available for existing environments as well as new projects, our typical services engagement involve these activities. Actual tasks may vary based on the nature of the consulting services opted for.
