## Cloud Confidence Starts here.

### Cloud Posture Health Check

Review of Cloud Security, Cost and Resilience with actionable wins.

### Cloud Resilience Snapshot

Focused Review of BC/DR, failover and monitoring per workload or landing zone

### Cloud Readiness Framework

Assess readiness, align strategy, and guide a structured, secure transition to the cloud. Our approach ensures every migration is planned, governed, and executed with confidence

## Cloud Maturity Assessment (CMA)

Understand where you are. Know where to go next.

A structured, independent view of your organisation's cloud capability across:  
Architecture | DevSecOps | Governance | Cloud Operations

Our CMA identifies strengths, gaps, and opportunities to improve how you design, secure, and operate in the cloud.

Deliverables:  
Maturity baseline mapped to best-practice frameworks  
Actionable improvement roadmap  
Executive playback with clear next steps

Outcome:  
Clarity, confidence, and a prioritised path to a more secure, efficient, and resilient cloud environment.

## Design. Build. Assure

### Taking you where you need to be

Cloud Architecture & Engineering – Design and implement secure, scalable, and compliant cloud foundations. We deliver secure landing zones, automated CI/CD pipelines, and governance guardrails that accelerate delivery while maintaining assurance.

DevSecOps Enablement – Integrate security seamlessly into your delivery lifecycle. Our teams embed Infrastructure-as-Code, compliance-as-code, and automated policy enforcement to ensure every release is secure-by-design and audit-ready.

SRE & Reliability Programmes – Build resilient systems that perform under pressure. We implement observability, intelligent automation, and reliability metrics (SLIs/SLOs) to improve uptime, reduce incident impact, and optimise operational performance.

## Continuous Cloud Confidence

### Managed Assurance

**Drop Table will:**

Conduct regular quarterly reviews to assess the ongoing security, compliance, and operational health of your cloud environments.

Implement automated assurance checks to detect drift, misconfigurations, and control failures before they become risks.

Ensure continuous alignment with evolving business, regulatory, and technical requirements.  
Provide executive summaries and action reports to maintain confidence, demonstrate compliance, and guide improvement.

**Outcome:**

Sustained assurance and cloud confidence — without the need for constant firefighting.
