

Unlock and master the power of cloud data

Access your free data capability assessment below

Is your data secure and accessible?

In order to derive beneficial insights from data across your organisation, your data needs to be held centrally, in a data repository. The Cloud is the ideal environment for this, given it's flexible and secure nature. Companies should assess the state of their data and the practical implications of creating a central data repository, in order to unlock insights in a matter of weeks.

Dufrain will enable your first steps towards being data driven, with our comprehensive, step by step, process to create a data insights repository for you

Workshops overview

We will assess your data landscape, with an initial half day FOC workshop, followed by an assessment (see pricing), of anywhere between 2-5 weeks. The assessments will deep dive into what data you have, where it is stored, what your data quality is, who uses your data and who should use it, along with determining quick wins and strategic goals that can be derived from surfacing greater insights from your data.

Benefits

- A comprehensive current state assessment from a data industry leader
- Clear, concise, enablement plan to deliver data driven benefits in weeks/months
- Rapidly putting power in the hands of your people
- Future proofed design and architecture, taking advantage of the Cloud

Key takeaways

- Workshop output with recommendations for assessment
- Formal assessment output detailing aspects of Data Strategy and recommended implementation pathway
- Thought leadership & guidance from data industry experts
- Access to Dufrain's wider data community and client groups

Pricing Options
