

Azure Infrastructure Settings

Configuring Infrastructure settings:

1. Navigate to **Administrator** -> **Infrastructure**.
2. In the **NAME** column, select the name of the Infrastructure you want to configure settings for.
3. Select the **Settings** tab, and click **Add**. The **Infra - Set Custom Data** pane displays.
4. From the **Setting Name** list box, select the setting (see list of settings below).
5. Click **Enable**, or enter an appropriate value.
6. Click **Set**. The setting is applied to the Infrastructure.

Infrastructure Settings

Cluster Autoscaler	Enables Cluster Autoscaler for the Infrastructure.
Enable Secrets CSI Driver	Enables SecretProviderClass Custom Resources to mount secrets for the Infrastructure.
