

Microsoft 365 Security Assessment Essentials

A review of your business's security risks

When did you last conduct a security review? Are you aware of the basic security requirements? Do you use Secure Score to gain insights into security? Security is becoming an increasingly important factor for any business that is already working entirely digitally or is on its way there. At the same time, levels of complexity and risks increase when everything is connected. This makes it more important than ever before to have an integrated approach to security.

Microsoft 365 Security Assessment Essentials helps you to understand the risks and needs of your business when it comes to work on security relating to Microsoft's product portfolio. The review gives you a snapshot of the IT environment linked to Microsoft 365 (formerly Office 365) and the current risks so that you can rectify them in a structured and secure way and work more proactively in the future.

What's the difference between Essentials and Advanced?

In Microsoft 365 Security Assessment Essentials, we review your business's basic security, while in Microsoft 365 Security Assessment Advanced, we conduct a far more comprehensive examination.

What do you get out of Microsoft 365 Security Assessment Essentials?

- A clear report that describes your business's risks and security needs
- Recommendations and time with our security experts
- A picture of how we can help you boost your work on security

How does it work?

1 Start-up meeting

We set out a common schedule, synchronise project expectations and identify stakeholders in our organisation and yours. We start the review with the aid of a survey that we conduct together.

2 Review

We continue with a more detailed questionnaire and go through Security Score and Office 365 ATP. We assess your business's current security status and you learn more about security in Teams, how to avoid identity theft,

secure your business devices and email solution, manage information and sensitive data, and create secure remote access.

3 Report and roadmap

We summarise the review. We then draw up recommendations and proposals for measures (in order of priority) that we feel need to be implemented in order to close the gaps we found. You will also have time here to sit down with our experts for a review of what they have found.
