

Modern Workplace Ready

Is your business ready for Modern Workplace and smart device management?

Many businesses are facing the challenge that employees and potential recruits are making tougher demands of their workplace and tools than they ever did before. While the boundary between work and leisure time is slowly becoming blurred. Many people want to achieve a work-life balance and be able to work anywhere, any time. This places tougher demands on the internal delivery of IT services. Your business needs to be able to offer tools that are both user-friendly and guarantee security.

The Modern Workplace Readiness Assessment helps you and your business acquire insights into your current IT environment and set out the roadmap to the digital, user-friendly and secure workplace we call the Modern Workplace.

What will you get out of a Modern Workplace Ready Assessment?

- A review of your current IT environment.
- Insights around smart device management, security and automatic rollout of clients, features and applications. With a view to laying the foundations for Modern Workplace.
- A roadmap for a seamless transition to Microsoft 365, Microsoft Endpoint Management and Modern Workplace.

How does it work?

- 1 Startup meeting**
We set out a common schedule, synchronise project expectations and identify stakeholders in our organisation and yours. We also start off the review with the aid of a survey that we complete together.
- 2 Review**
We continue with a more detailed questionnaire, conduct a technical review, go through the current settings and suggest how they should be defined. You find out how to set up smart device management and how to secure devices and users with the aid of automatic registration and automatic installations of devices and features.
- 3 Report and roadmap**
Once the technical review has been completed, we will compile the various parts of the review. We then draw up recommendations and proposals for measures (in order of priority) that we feel need to be implemented in order to close any gaps we found. You will also have time here to sit down with our experts for a thorough review of what they have found.
