DXC TECHNOLOGY

Smart Working Spaces

The office environment is under pressure to support a secure hybrid workforce, improve employee productivity, and maximize real estate utilization. A noticeable shift is underway transforming the employee experience and creating new opportunities for management, automation, and analytics.

DXC provides capabilities to simplify the deployment and management of previously complex Audio-Visual services into a simple, repeatable, and supportable consumption model based on best-in-class technology. Streamline your problematic and inefficient reservation and collaboration experience by enabling employees to intelligently find the best spaces to work and collaborate, while the business optimizes real estate. Our end-to-end delivery model leverages support services and dedicated Microsoft support teams. This means you get the support you need quickly so you can focus your efforts on running your business.

DXC understands how to work in complex environments, protect critical processes and meet tight timelines. We deliver outcomes that result in improved services, inclusive experiences, and significant savings. Our Smart Working Spaces capabilities include:

- Meeting Room Solutions - Scheduling meeting rooms is only half the journey. Once in a room users need to be able to seamlessly collaborate with in-room and remote participants with high quality audio and visual capabilities across interactive displays, conference phones, and webcams. DXC leverages our ecosystem of best-in-breed AV partners to offer several options in this space.

- Space Management - With a variety of user interfaces employees can easily schedule or instantly book several resource types stretching across meeting rooms, hot desks, huddle spaces and more. Interfaces include a mobile app, a Microsoft outlook plug-in, web portal, kiosks, event board and room panels outside of each room.

- End-to-End Service Management - DXC provides a full end to end service as a single point of contact across the initial assessment, design, deployment, integration, support, and management services for all service components.

➢ Key Benefits

Inclusive in-office and remote participant video conference experiences.

Turn any room into an easy-to-use, one touch join, collaboration space.

Keep devices secured, reliable and up to date with rich management capabilities and powerful analytics.

Collect hard metrics about utilization across multiple sites with disparate technologies.
