

## Managed Applications

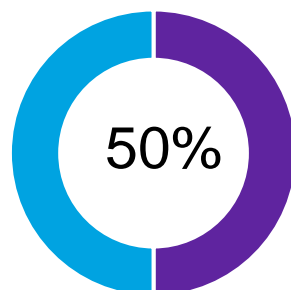

Leverage a transformative service for cohesive management of complex application portfolios to reduce cost, increase productivity, and improve quality.

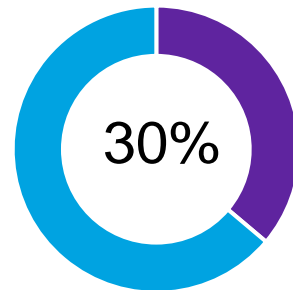

### Improve Resiliency, Increase Agility, Reduce TCO

Improved operational efficiencies

Faster speed to market

reduced costs through automation

## Shift from operations to innovation

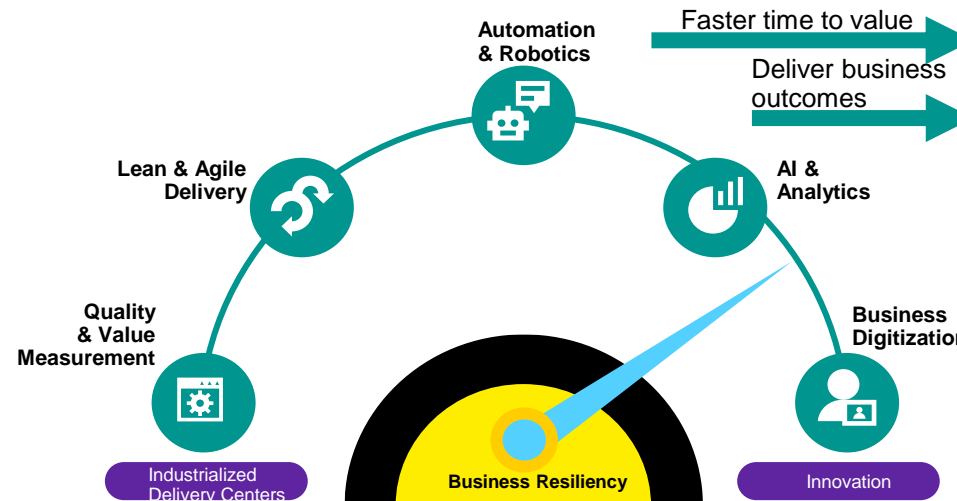

**30%**  
Reduction in application costs through automation

**15k+**  
Applications modernized to the cloud

**40%**  
Increased productivity through automation

**86k+**  
Application professionals

**65k+**  
Workloads transformed

### Achieve greater insight, speed and efficiency

Leverage analytics and artificial intelligence, lean processes and leading automation capabilities through [DXC Platform X™](#) to produce greater insight, speed and efficiency — and deliver better business outcomes.

Operational efficiencies and gains are achieved by deploying our Application Service Automation for real-time monitoring, automation resolution, robotics, intelligent dashboards and continuous innovation. Meantime for resolution and faster release of new features is significantly improved with our hyperautomated integrated operation.

## Success stories

- DXC is helping Uniper introduce **robotic process automation (RPA) to increase efficiency by reducing manual transactions** needed for a variety of processes, including customer billing and reconciliation
- Croda International achieves **improved performance, availability and connectivity** by entrusting the company's SAP financial, manufacturing and executive reporting functions to DXC.
- A major fast food chain realized a **43% reduction in IT related incidents** when DXC began managing their application environment across 3200 locations.
