

# What is DXC's AI Workbench?

It is an accelerator ecosystem for Generative and Agentic AI

**Empowers business users and technical users to use AI daily** thanks to pre-built templates and components.

**Solves real, industry-specific problems without vendor lock-in.**

**Swap tools in and out of AI Workbench** as the market and specific needs evolve.

**Enterprise-grade:** Scalability, reliability, security, compliance  
**Production-ready:** Fully developed to be safely deployed  
**Curated:** Strategic selection of market components  
**Modular:** Pick and choose what you need

# Who can benefit from AI Workbench?

## Business Users

### Enable non-technical users to use AI daily

- AI Marketplace: pre-defined industry-specific agents
- Chatbot UI with Tools
- Multi Agent Chatbots
- Voice Chatbots
- Agent Creation UI
- RAG Creation UI
- Backoffice

## AI Engineers

### Simplify development of agents and agentic workflows

- AI Observability
- AI FinOps
- Agent Marketplace
- MCP Marketplace
- Windsurf vibe coding tools

## Core Developers

### Facilitate management and monitoring of core AI components

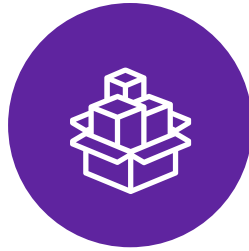

- Deployment automation
- Security and access control
- Logging and observability frameworks
- Agent blueprints
- Agent Registry and MCP Registry
- System Integrations

# What makes AI Workbench different

## Stay on top of best available on the AI market

Continuous integration of new tools & features based on market research of rapid AI evolutions

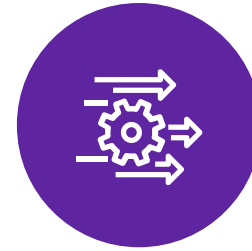

## Modular & complementary integration

Supports the integration of in-house, open-source and 3<sup>rd</sup> party developments to integrate any tool and agent

## Generates production-ready code

Vibe coding based on preferred guidelines using pre-built MCP and agent components with full integration of code

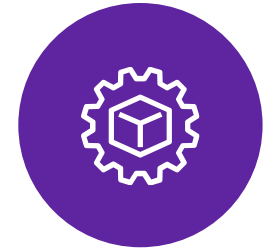

## Accelerates agents, agentic workflow and use case creation

Creating agentic workflows using pre-built libraries, components of agent templates and MCP servers; automated one-click deployment

## Governance and observability across company

Configurable cost control of model usage; visibility of all performed operations in one place

## Flexible, customized & specific

Swap tools in and out of toolkit as the market and needs evolves; LLM model & provider independence; agents understand your specific database and code
