

# DXC Solutions for Power Platform

## Introduction and Overview

“new DXC”

# DXC Solutions for Power Platform

With the Microsoft Power Platform, you can analyze data, build solutions and automate processes across your organization. In fact, you can do more than just solve problems — you can transform your business from the ground up.

DXC solutions for Microsoft Power Platform is our service that unlocks maximum value from investment in Microsoft’s Power Platform technology. The service has grown out of our unrivalled experience in helping customers maximize the huge potential of the Power Platform to drive innovation and unlock business value.

With our comprehensive service you’re never on your own. From initial ideation workshops, training and product build support, through to deployment, support and maintenance, the service encourages innovation and provides real business value from the outset.

# DXC’s Microsoft Business Applications at-a-glance

|                                                                                                                                                       |                                                                                                                                                               |                                                                                                                                                                         |

# DXC Services

# DXC Power Platform offerings

## Innovate at speed

### Power Platform Training

Accelerate user adoption

- A selection of one-to-five-day focused training programs designed to help users rapidly build and deploy apps
- Course topics include PowerApps, dashboards, Power BI and Power Automate
- Training in how to get started, best practices, design patterns and application lifecycle management

### Power Apps Deployment

Innovate at speed

- Design-thinking approach, deep analytics knowledge and cross-industry best practices help create easy-to-use apps that connect to the most relevant data and insights across the organization
- Deploy a number of DXC Power App solutions or DXC Power Platform services that leverage deep industry experience and broad range of award winning solution innovation

Advise and innovate

Govern

### Innovation Governance

Center of Excellence framework

- A low-code Center of Excellence approach provides templates, best practices for design, maintenance models, and more to help the organization embrace low-code technologies
- Adaptive governance creates repeatable apps and virtual agents, providing safeguards for data and access integrity, and data privacy. Monitoring capability governs deployments and development to ensure users are supported and adhere to best practices

# A governance framework for innovation success

## Encourage innovation and provide business value

- Nurture innovation and disruptive technologies with DXC and Microsoft’s Power Platform
- Train stakeholders in how to get started, best practices, design patterns and application lifecycle management
- Get support and managed service offerings to ensure business critical solutions are supported with SLA’s and upgrade services
- Govern deployments and developments through monitoring tooling to ensure you are supporting business users and adhering to data security best practice

### Component options

- Infrastructure and deployment
- Training
- Ideation workshops
- Product build support
- Deployment
- Support and maintenance

### Options:

- |                                                                                                            |                                                                                                                                    |

| <p><b>3</b> Ideation workshops designed to get you started with your first deliverable</p>                 | <p><b>6</b> A full support and managed service offering to ensure business-critical applications will be available when needed</p> |

# Benefits

We help organizations embrace low-code technologies to allow employees to produce high-efficiency apps and virtual agents that accelerate innovation and bridge the gap between what the business needs and what IT can deliver.

## Improve productivity

Support the development of user interfaces, business logic and data services, that improve productivity, as compared with conventional application platforms.

## Optimize operations

Automate workflows, flexibly adjust business processes and gain a complete view of the business from manufacturing to sales to service to accelerate the speed of doing business.

## Increase automation

Automate processes that are currently manual to provide efficiencies and free up time for more innovative work and provide additional insights.

## Expand innovation

Empower the business by introducing self-service innovation through low-code technology thus allowing employees to offload the burden of manual tasks to technology.

## Gain intelligence

Harness your data estate by uncovering data and insights that will bring value to the organization and may not have been used turn data into business agility democratize your data estate.

## Empower employees

Employees are well positioned to uncover relevant data and insights that will bring additional value to the organization.
