

DXC Warehouse Scanning

Paperless warehouse interface for Dynamics 365 Business Central

Built on the Microsoft Azure platform and directly connecting to Dynamics 365 Business Central, DXC Technology's Warehouse Scanning solution connects a barcode scanning mobile device directly to key warehouse activities from receipt through to dispatch with no need to access a computer or printout.

**Compatible with iOS and
Android operating
systems.**

Work can be assigned directly to operators or left in a pool for selection as operators become available. Flexible configuration allows workers to perform ad-hoc activities or be directed on tasks to be completed.

All operations are connected directly to Dynamics 365 Business Central, which records statistical operator data for analysis. As each line is processed on a mobile device, the line is transmitted for recording.

Contact DXC Technology to discuss the warehouse scanning solution today.

Receipt

- Process faster, reduce bottlenecks
- Serial and Lot entry with expiry dates

Put-away

- Prioritise urgent activities
- Directed to bin locations
- Split put-away between multiple zones or bins

Pick

- Directed pick or operator preferred
- Serial and Lot identification

Movement

- Bulk movements made easier
- Manager or operator initiated

Dispatch

- Allocate inventory to truck
- Loading in sequence

Stocktake

- Directed or flexible counts
- Full history recorded

Pack

- Pick and pack together with pick identifiers

Management

- Real-time progress feeds
- Prioritise to operators
- Identify bottlenecks

Accuracy

- No double entry
- Serial and Lot tracking for all operations
- Fully directed locations
