

AX 2012 to D365 Upgrade

Technical upgrade to the latest and greatest Dynamics AX platform!

Gone are the days of on-premise infrastructure, thick-clients and terminal servers. Using cutting-edge cloud infrastructure and web-based clients, users from across the world can quickly and easily perform their jobs and provide you with a competitive advantage.

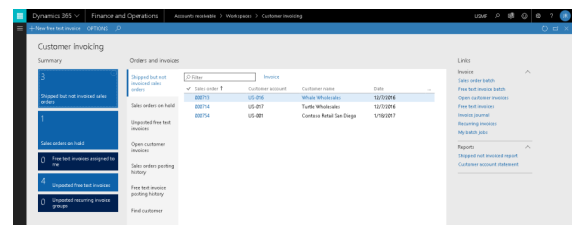

Microsoft has provided a toolkit to upgrade from Dynamics AX 2012 to Dynamics 365 for Finance and Operations. While the upgrade toolkit is incredibly powerful, there are occasionally some “gotchas”. Because we’ve performed many of these upgrades, Dynamic Consulting can help walk you through this process with as few issues as possible.

The fewer customizations in AX 2012, the better. Customizations and non-standard data require additional investigation prior to upgrade, so Dynamic Consulting’s estimate only accounts for standard implementations. If your solution is heavily customized, let us know and we can investigate ahead of time and provide a more accurate estimate.

With a trusted Gold ERP partner like Dynamic Consulting, upgrade today to get the most out of your enterprise level ERP system!

How does this work?

- We’ll help you upgrade your AX 2012 license to a D365 license and get an LCS project created
- We’ll deploy an upgrade environment (some additional Azure consumption costs may apply) and upgrade a test copy of your production AX 2012 database
- After user testing has signed off, and we’ve helped navigate through any deprecated functionality, we’ll upgrade the production AX 2012 database to a D365 database
- We’ll provide some nominal post-go-live support to assist with anything that may have been missed during user acceptance testing
