Microsoft 365 optimization assessment

What we look at

- Security posture - We assess your access controls, permissions, and overall security configuration to identify and address any vulnerabilities.

- Licence utilisation - Are you paying for features your team doesn't use? We'll pinpoint these areas and help you optimise costs.

- Workflow efficiency - Our assessment examines your current setup and identifies opportunities to streamline processes and user management.

- Identity and access management - We ensure the right people have the right access at the right time, enhancing security and user experience.

- Data storage & backup - We review your storage practices, identify optimization opportunities, and verify proper backup and disaster recovery plans.

- Third-party tools & integrations - We evaluate the effectiveness of existing tools and help you optimise your Microsoft 365 ecosystem.
