

E-Level -- Threat Search as a Services

e-level
Cloud Services

Currently, we can have different levels of threats: we find them in the firewall, email, browsing, or on the user's workstation, for this there are a large number of solutions that minimize the risk of compromising data, identities or devices according to be the case.

Challenges

- Have appropriate Computer Security tools for the organization
 - React early against sophisticated attacks.
-
- Invest in specialists for each of the security tools acquired.
 - Know abnormal behavior in users of the organization and be able to prevent user commitments.

Ideal Solution

- Tools that speed up the detection of anomalous behavior of the user's identity, as well as modern threats that could compromise the organization's information.
-
- Solution that offers customers peace of mind in order to fully exploit the tools they have acquired and be an extended arm of the organization and, at the same time, they have the peace of mind that specialists can offer.

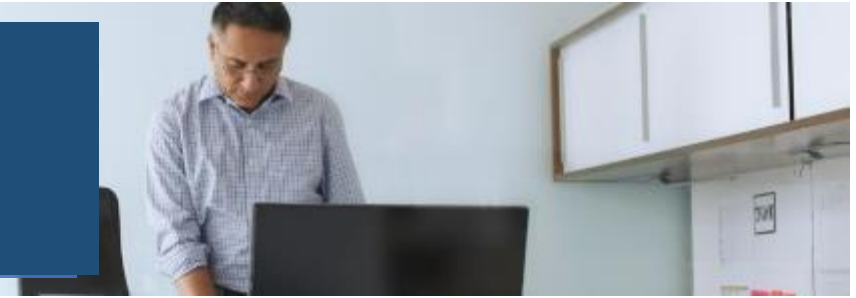

Desired Results

- Anticipate modern attacks on organization assets.
 - Having a specialist area that gives business peace of mind.
-
- Reduce the risk of loss of information.
 - Personalized reports that help to know the real situation of the organization regarding security.

E-Level Threat Search as a Services + MDAT + CAS
