Assessment

eacs OptimiseSecurity assessment

Moving to the cloud brings many benefits – flexibility, shared risk and perhaps most importantly, agility. But with agility, things can get out of hand quickly – your IT team is only too delighted to be able to stand up a new project requirement overnight, but at what cost?

Governance and control often play second fiddle to business pressures, yet over 50% of organisations publicly expose at least one cloud storage service.

The **eacs** OptimiseSecurity Assessment delivers the analysis and visibility organisations need to detect, respond, and prevent security and compliance gaps that leave them exposed. It provides a single view of security posture across all the major cloud providers enabling traceability of unusual user access and changes in configuration – protecting you against data loss and unauthorised access to your cloud accounts.

Best of all, it will give you clear recommendations for dealing with the risks that are identified and support in getting your clouds in order.

How well do you understand your public cloud environments?

Do you have visibility of potential threats?

Have you left the back door open?

Are your meeting your compliance obligations?

the **eacs** approach

OptimiseSecurity is powered by Sophos Cloud Optix. Cloud Optix protects organisations from the next generation of automated public cloud cyberattacks and compliance penalties.

It enables organisations to accurately visualise and secure multi-cloud infrastructure continuously and confidently, combining the power of AI and automation the service enables security, operations, development, and compliance teams with the security and collaboration tools to own and automate security and compliance response.

Request your OptimiseSecurity Assessment at https://eacs.link/cloudsec or contact your Client Manager to learn more.

Discover
eacs and your team will work together to define the scope of the assessment, understanding your cloud footprint today and into the future

Monitor
Every 60 seconds, Cloud Optix will monitor and assess your cloud estate and analyse it against industry standard compliance benchmarks such as GDPR and PCI

Review
eacs will check in with your team after 7 days to highlight any major risks and quick wins

Report
The report will be presented by a Cloud Solution Architect with clear, concise guidance that can help improve your cloud security posture and minimise your risks
