

Migration of UEM Systems

Swift and simple –
thanks to EBF Onboarder

Do you still have the right UEM system?

As time goes by, you may want or need to change
your UEM system.

There can be many reasons for making a change

Further development of technologies: A different UEM system is now better able to meet your **requirements** than the previous system or is able to **interact** better with **other software**.

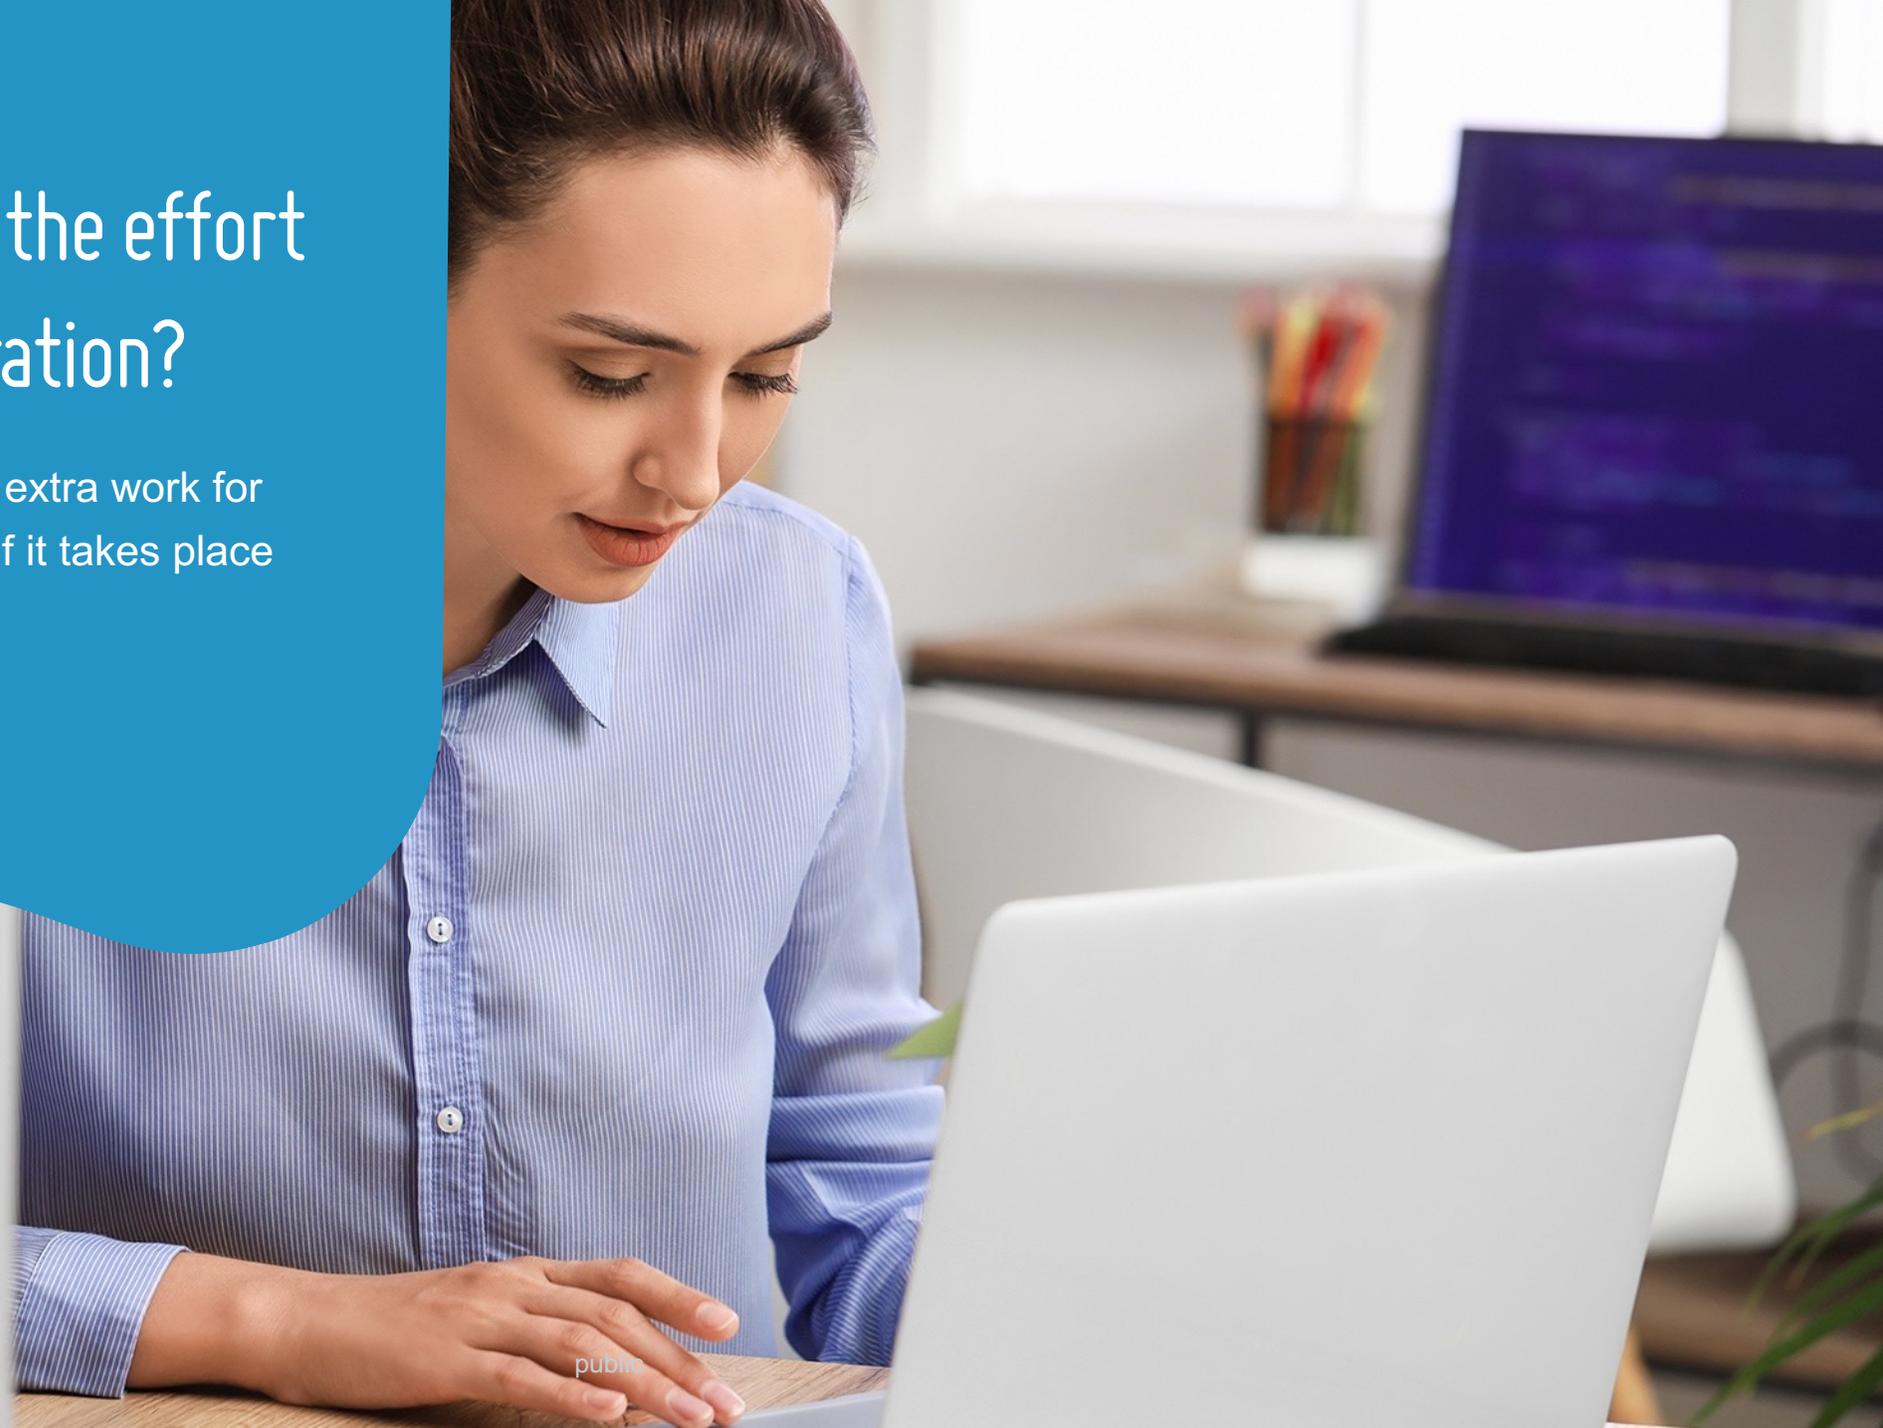

End of life: Your UEM system is **no longer supported** (e.g., SAP Afaria, Windows 10 Mobile).

Consolidation: Acquisitions or similar processes lead to the use of **various UEM systems**, which require consolidation.

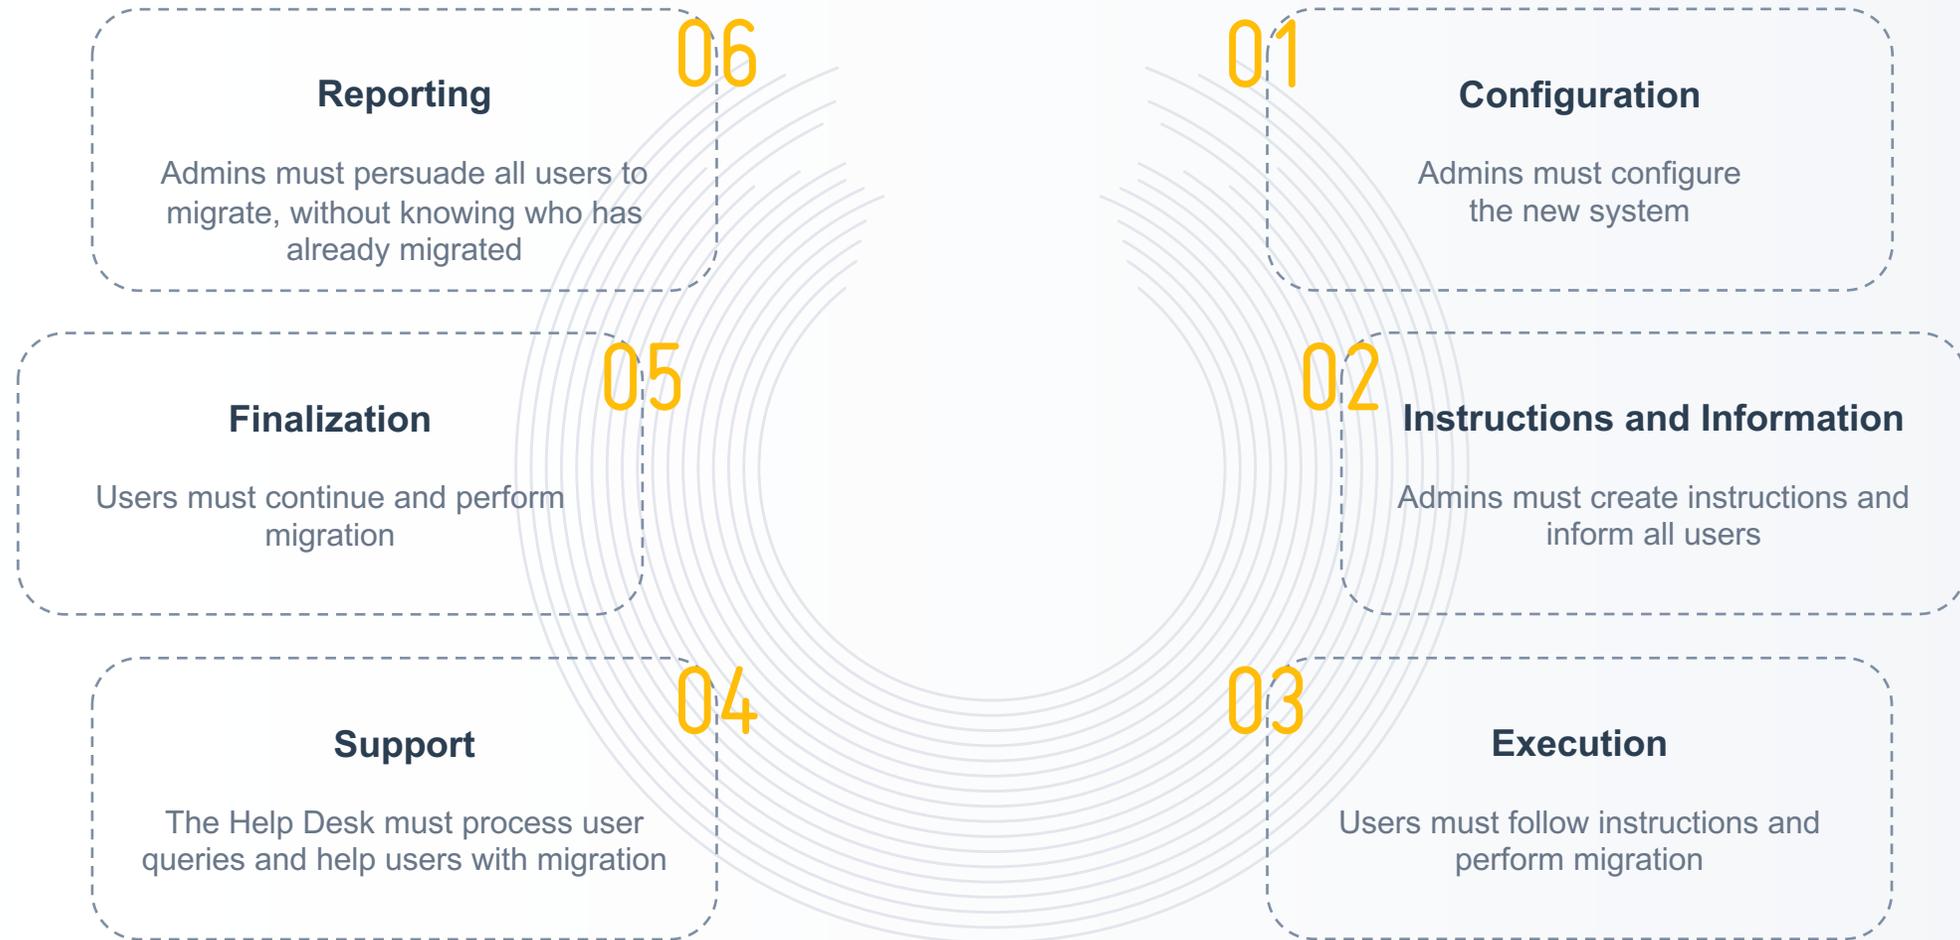

Are you dreading the effort required for migration?

Migration can mean a lot of extra work for administrators and users – if it takes place manually.

Manual migration is costly and error-prone

A photograph of three business professionals walking and laughing in front of a modern building with large glass windows. The man in the center is wearing a brown jacket and glasses, holding a laptop. The woman on the right is wearing a light-colored blazer and holding a tablet. The woman on the left is wearing a white shirt and glasses. The scene is bright and positive.

We help you to achieve extensive automation for your UEM
— with transparent communication, a perfect overview and
little effort required of IT and users!

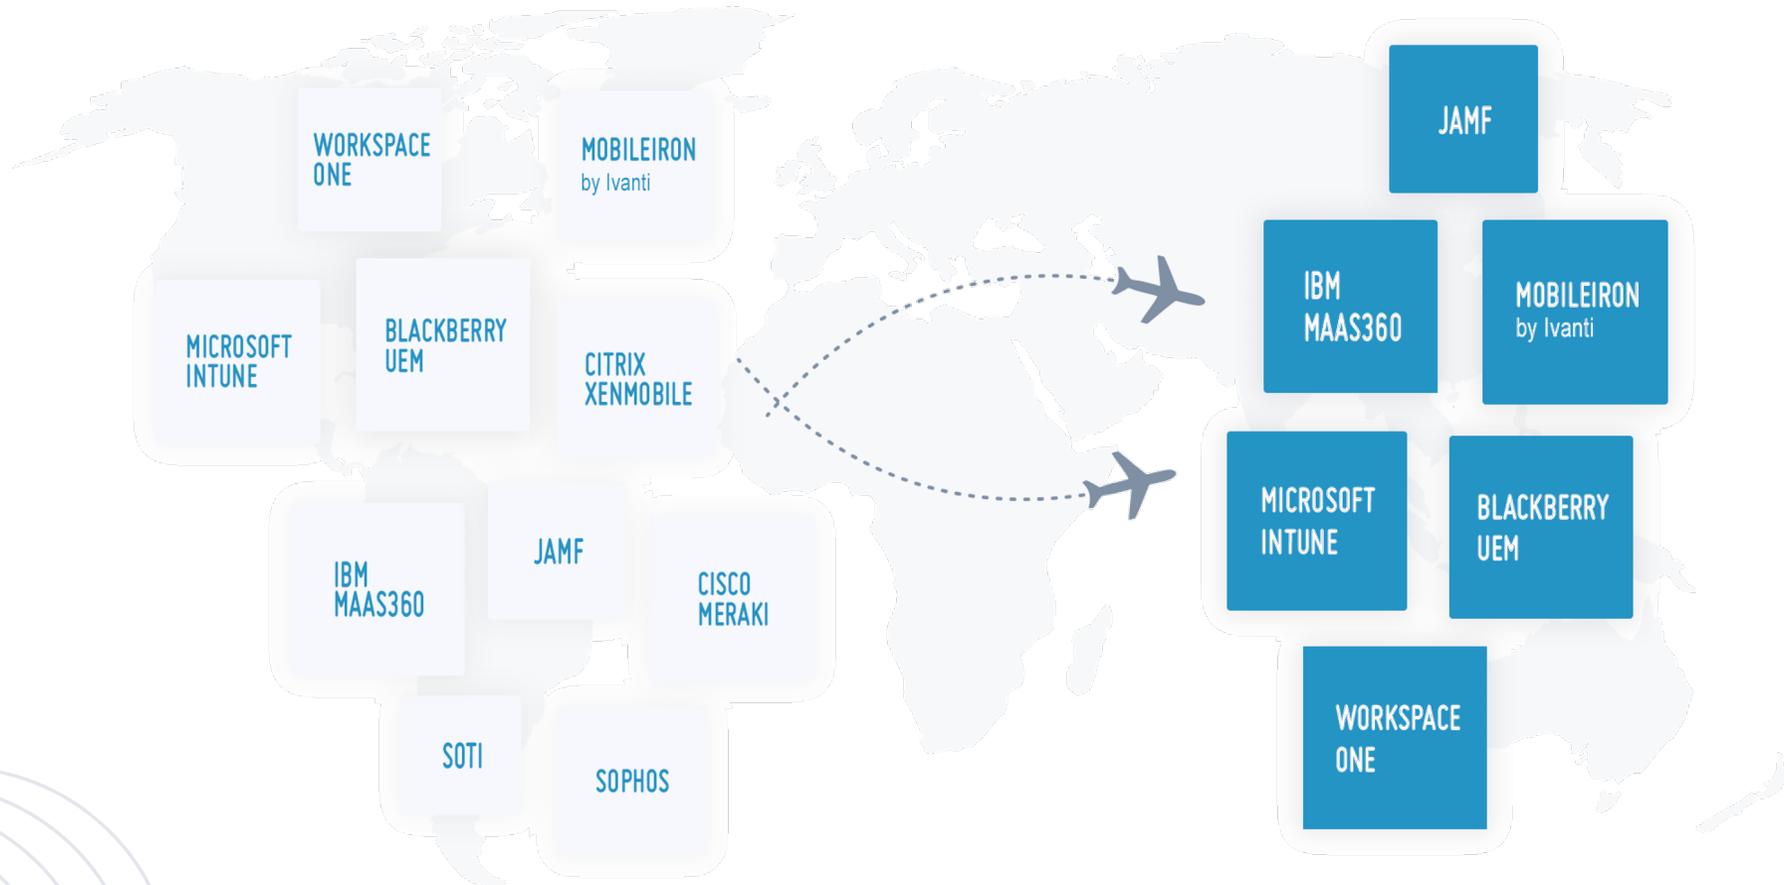

THE
SOLUTION

Automated migration of UEM systems

The EBF Onboarder allows you to change to another UEM system in no time, or to switch from on-premise to a cloud version.

Source and target systems for the EBF Onboarder

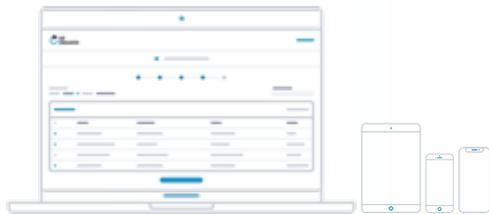

The switching process for the EBF Onboarder

Configuration

Configuration of the platform and selection of devices

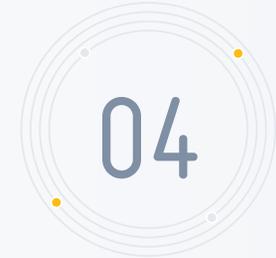

Information

Information for users about the upcoming switch

Initiation & Execution

Migration at a time of your choosing – using a clear interface

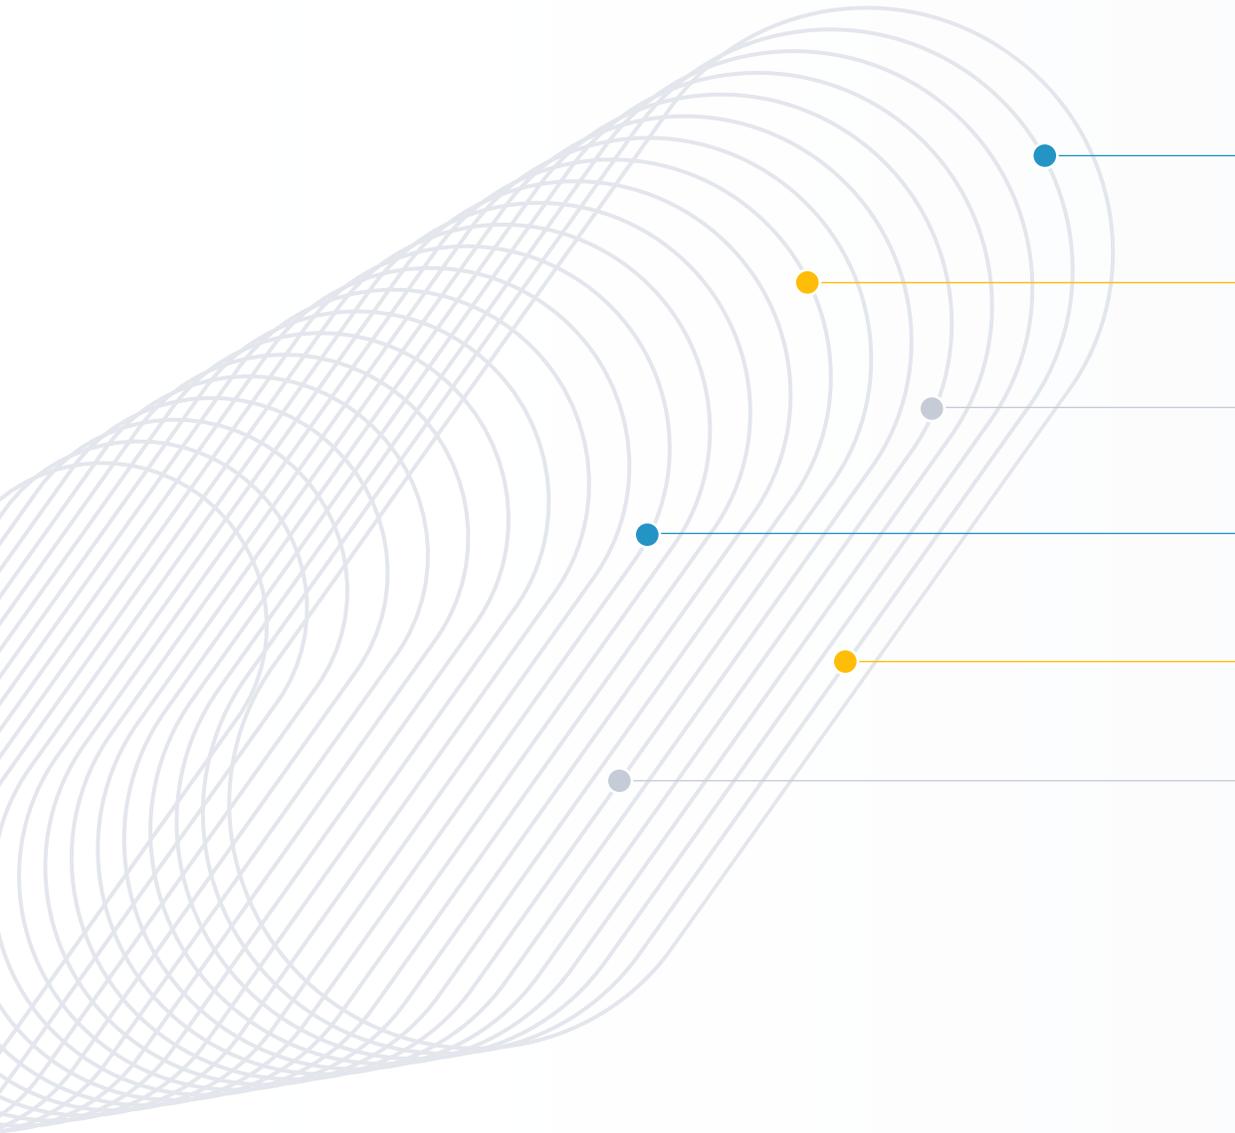

Monitoring

Status monitoring using the platform

Advantages of the EBF Onboarder

Relieves the strain on IT

Significant cost reduction

High degree of time saving

User- friendly thanks to simple migration steps

High level of transparency for migration status

Transparent communication to users

More than 1.5 million devices
have been migrated successfully

Including migration projects for 500 devices as well as scope for 100,000 devices – with various source and target systems.
