DIGITALL

A TAILER-MADE CHATGPT FOR YOUR COMPANY

CUSTOMIZED, SUMMARIZED & PERSONALIZED ANSWERS – WITH GPT

Companies possess thousands of documents that contain valuable and significant information for both customers and internal employees. However, analyzing these documents to extract the relevant information can be challenging and time-consuming, particularly during live conversations with customers, such as sales pitches or support cases.

Introducing DIGITALL, a customized GPT solution
We harness the cutting-edge technology of Azure OpenAI to scan and extract pertinent information from thousands of documents, allowing you to receive precise, written responses for customer inquiries or internal requests.

Leveraging Azure OpenAI, NLP (Natural Language Processing), and a reading comprehension model, we provide a comprehensive solution.

YOUR BENEFITS

Time-saving
The DIGITALL tailor-made GPT swiftly scans and analyzes thousands of complex documents, extracting relevant information within seconds.

Maintenance-free
There is no need to maintain an ever-changing library of important topics, FAQs, or other crucial information. The DIGITALL tailor-made GPT is a generic solution capable of answering any question as long as the relevant information is found in the source documents.

User-friendly
Users do not require expertise to utilize the DIGITALL tailor-made GPT. The combination of Azure OpenAI and ChatGPT provides answers in full text, which can be promptly shared.
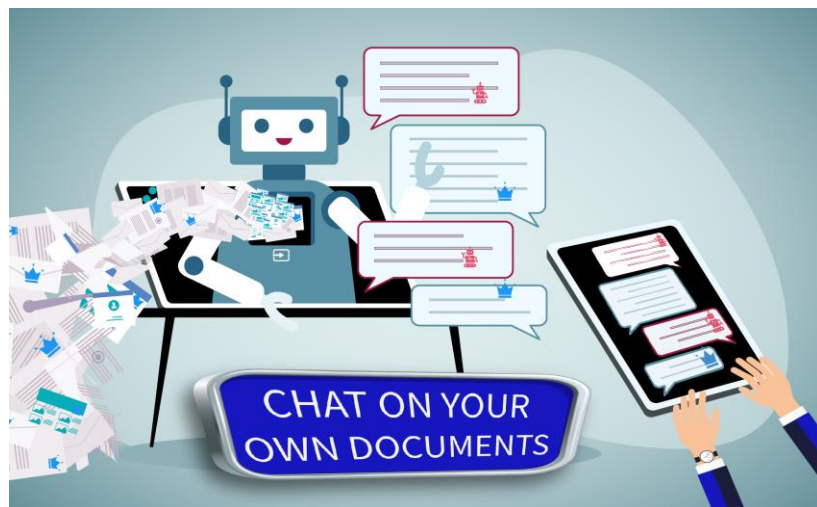

Scalability
Our solution is entirely cloud-based and leverages ChatBot, ChatGPT, and OpenAI technologies.

HOW DOES IT WORK

Your employees or customers can input any question through the "GPT" portal or directly via the chatbot, which can be easily integrated into your Microsoft ecosystem such as Dynamics365, Teams or Power Pages .

The question, along with the identified paragraphs and a corresponding instruction, is sent to your personalized GPT. This GPT digests all the documents and information you have provided to deliver the correct answer to the customer or employee, relying on an advanced and comprehensive reading model.

Our solution efficiently finds the desired information from thousands of documents, performs an analysis, and generates a written response that can be utilized, shared, or further processed.
