CAPABILITY STATEMENT

Advance Sustainably with an Intelligent Data Platform

ECF Data helps organizations build intelligent, scalable data platforms that support sustainability reporting, ESG analytics, and data-driven environmental impact tracking.

We enable clients to modernize their data estates using Microsoft Fabric and Microsoft Cloud for Sustainability — **unlocking insights that accelerate responsible growth.**

CORE COMPETENCIES

Cloud-Scale ESG Data Platforms
Architecting ESG data estates using Microsoft Fabric to unify sustainability data sources for reporting and analysis.

Sustainability Reporting Environments
Designing Power BI dashboards and report templates aligned with ESG and regulatory frameworks.

Microsoft Sustainability Manager Integration
Streamlining environmental data tracking and compliance by connecting operational data with MC4S frameworks.

Intelligent Analytics & Governance
Delivering real-time ESG metrics with data governance, transparency, and trust at the core.

Fabric-Based Lakehouse Architecture
Implementing modern data platforms using open lakehouse models to centralize fragmented sustainability data.

COMPANY OVERVIEW

As a certified Microsoft Partner with deep expertise in Azure and Fabric, ECF Data delivers:

- End-to-end deployment of ESG analytics solutions.
- Sustainable cloud architecture aligned with corporate responsibility goals.
- Scalable data models for compliance, transparency, and insights.
- Accelerated delivery through design thinking and automation.

CHALLENGES SOLVED

We help clients overcome:

- Fragmented ESG data sources and lack of centralization.
- Manual sustainability reporting processes.
- Complex regulatory data requirements.
- Limited visibility into environmental performance.
- Difficulty linking ESG goals with measurable outcomes.
