

# EdiNation EDI API

A fully managed API platform for translating, validating and documenting your B2B and Healthcare files

Enable your applications for Electronic Data Interchange with our API that relies on the power and scalability of Azure

Accelerate your application development with seamless translation between EDI and JSON. Detect, visualize and diagnose problems for increased transparency and ensure your important data is fully compliant. Customize your EDI transaction formats and validation rules to match any partner-specific requirement.

Fully managed API platform

Built-in REST API infrastructure maintenance, security patching, and scaling

Built-in support for all EDI formats

X12, HIPAA 5010, EDIFACT, HL7, EANCOM, VDA, NCPDP, IATA, and many more

Fully configurable EDI transactions

Create and edit EDI definitions as OpenAPI or automatically import SEF files

Rigorous security and compliance

HIPAA compliant API, an industry-leading 99.9% SLA, hosted on Microsoft Azure's global infrastructure
