Dixeo Course Generator

Courses / AI Course Generator

AI Course Generator

General   Reports

Enter the course you want to generate: topic, number of sections, and quizz if needed.
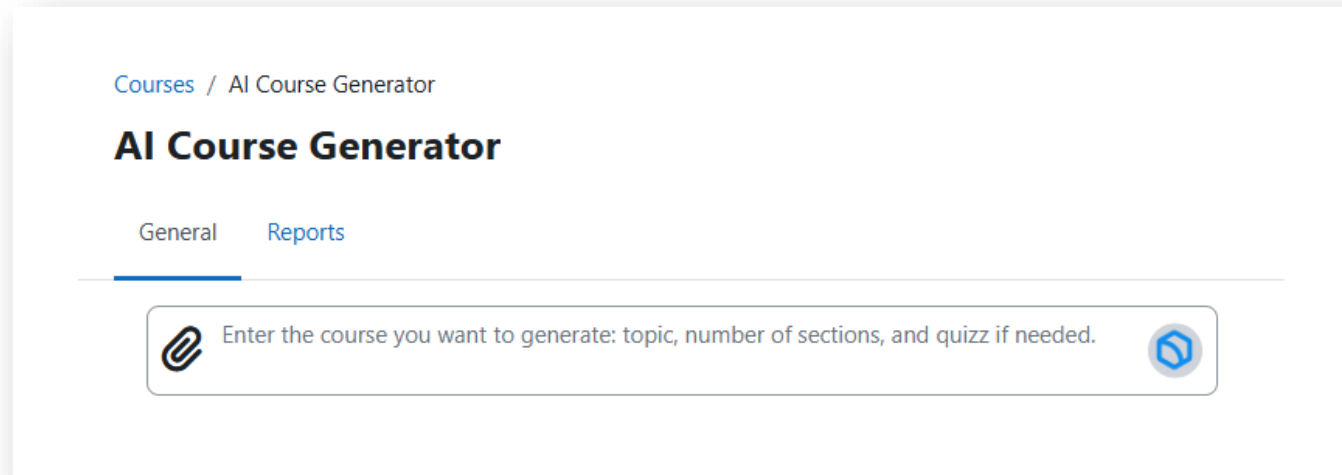

Generate a complete, ready-to-use Moodle course with resources and activities

- Select "AI Course Generator" from Site Admin – Learning menu (*requires system permission to create courses*)

- Enter the subject of the course and optionally the desired structure and activities, or a blank course

- Optionally attach your source files (PDF, Word, Powerpoint, audio/video transcript, URL, etc)

- Dixeo generates the content and activities, creates the course, and sets necessary parameters for use

- LaTeX and mathematical equations are supported

« An Introduction to Accounting for first-year business students including a quiz of 20 questions »

« An empty course with 5 sections, each containing a page and a quiz »

« The Life and Times of Auguste Rodin, with a chapter on his early works, his major works, and his legacy »

« A history of mexico, with a chapter for each major era, a chapter for modern US-Mexico relations. include a short comprehension quiz in each chapter »

Dixeo Content Generator

Enrich a course with new resources and interactive activities

- Add the Dixeo Generator block to a course to generate content with AI

- Generate new Page, Text & Media (Label), Glossary, or Dixeo Slideshow resources

- Generate evaluations:
  - Dixeo Simple Quiz for short comprehension tests
  - Moodle Quiz with 5 question types : Multiple Choice, True-False, Ordering, Missing Word, and Numerical
  - H5P Quiz (*coming soon*)

- Generate fun and interactive H5P activities including Crossword, Find Missing Words and Flash Cards

- Generate a new Section containing multiple resources and activities in one request

- Export the course content as a PDF

Dixeo Content Editor

Edit Pages and Text & Media content with the help of AI

- Edit content manually or with the help of the AI

- Create rich multimedia content including text, video, and sound

- Use generative AI to add new text, images, examples, case studies, references …

- Use pre-programmed queries to quickly enrich, translate or prettify content

- *Access the editor with the "Edit" item in the activity menu*

Discovering Paris, France

Introduction

Paris, often referred to as the *City of Light*, is the capital city of France and a global center for art, fashion, gastronomy, and culture. This activity will guide you through the highlights of France's enchanting capital, renowned for its architectural beauty, rich history, and vibrant lifestyle.

Other Names for Paris

Paris has several affectionate and historical nicknames that reflect its allure and cultural influence:

- **La Ville Lumière (The City of Light):** A reference to its role as a hub during the Age of Enlightenment and its early adoption of street lighting.
- **Paname:** A casual and informal slang term often used by locals in everyday speech or songs.
- **The Romantic Capital:** This name highlights the city's association with love, making it a top destination for couples and honeymooners worldwide.
- **The Fashion Capital:** Globally recognized for its influence on haute couture, luxury brands, and Paris Fashion Week.

These nicknames capture the multifaceted charm of Paris, celebrating its historical, artistic, and contemporary identity.

Hi! I'm Ed, your AI tutor. How can I help you with this course?
04:31 PM

summarise this course
04:32 PM

This course, "An Introduction to Accounting," is tailored for first-year business students and provides a comprehensive overview of accounting principles, terminologies, and practices. It covers essential concepts and methodologies ranging from basic definitions to the preparation of simple financial statements. The course aims to equip students with the foundational knowledge needed to understand and apply accounting principles effectively, culminating in a quiz to assess comprehension of the material.
04:32 PM

what is the accrual principle ?
04:33 PM

The accrual principle dictates that revenue and expenses must be recorded when they are incurred, rather than when cash is exchanged. This principle ensures that income and expenses are matched with the time period they relate to, providing a more accurate financial picture.

For example, if a company performs a service in December but receives payment in January, the revenue is recorded in December because that is when it was earned. This principle is crucial for matching revenues with the expenses incurred to generate them, enhancing the clarity of financial statements.
04:33 PM

can you repeat in French ?
04:34 PM

Ask Ed

patents.

Assets are a crucial component of the accounting equation, which is: **Assets = Liabilities + Equity**. This equation shows that everything the business owns (assets) is financed by debts (liabilities) and the owners' contributions (equity).
04:35 PM

give an example of a current asset
04:36 PM

A common example of a current asset is **cash**. Cash is considered a current asset because it is available immediately for use in business operations. Other examples of current assets include:

- **Accounts Receivable**: Money owed to the business by customers for goods or services delivered but not yet paid for.
- **Inventory**: Goods available for sale that a business holds in stock.

These assets are expected to be converted into cash or used up within one year.
04:36 PM

who can i contact for help ?
04:45 PM

You can contact Andrew Wright for help with the course. Here are his contact details:

- **Email**: andrew.wright@dixeo.com
- **Phone**: 01.34.67.35.44
- **Office hours**: Monday to Thursday, 4pm-5pm

Feel free to reach out during his office hours for assistance!
