Power Apps & Power Automate

1-Day Workshop

This 1-day workshop is intended for people working in business, IT, or as data analysts that are passionate about developing the ways in which their organizations work. During the workshop, Efima's experts will guide you through how Microsoft Power Apps, Power Automate and Common Data Service (CDS) respond to the needs of today's business processes.

Efima has designed the workshop in a way that lets you experience in action how Power Platform's tools work together allowing you to create low-code solutions for anything you might think of.

After the workshop the participants have a basic understanding of developing applications with Power Apps, creating automation workflows using Power Automate, and how to apply these skills in building their own custom business solutions.

Agenda

Power Apps
Basics

A guided exercise during which the participants build their very first app for collecting and displaying data.

Power Automate
Basics

A guided exercise for adding automation workflows to Power Apps using Power Automate. Office 365 Connector will be used to create an approval workflow based on information received via email.

CDS
Basics

A guided exercise on how to set up a data warehouse using Common Data Service.
