Power Apps & Power Automate

3-Day Proof of Concept

No time to develop all the apps that you already know Power Apps would be perfect for? Or struggling with manual tasks that take up way too much of your valuable time?

Whichever the case is, we at Efima can help you build a custom application tailored to your needs and show you how Power Platform's tools work together allowing you to create low-code solutions for anything you might think of.

During this 3-day POC we evaluate the business process you've chosen and help you build a Power App based on that idea. This is the ideal way for you to showcase your idea within your organization with a fully-functional prototype!

Agenda

- Kickoff meeting with Efima's experts
- Efima drafts the specifications and gets an approval from you
- Efima builds the POC app based on the approved specifications
- Microsoft Power Apps, Power Automate, Common Data Service (CDS) and Power BI will be the tools used

Deliverables

- Power Apps and Power Automate -licenses to test the solution
- A functioning Power App based on your idea
- Data flows created with Power Automate
- Data storage built using Common Data Service forApps
- Data visualization using Power BI
- Demo of the finished solution
