Microsoft Azure Infrastructure

Azure Infrastructure: migrating from VMware to Azure, scalable solution.

Work harder, adapt faster, and perform better with a streamlined solution built for today's cloud-driven landscape.

At Eide Bailly, we don't just deploy Azure Infrastructure, we architect it around your business goals. Our cloud solutions are designed to be scalable, cost-efficient, and resilient, with built-in disaster recovery, enterprise-grade security, and compliance features that meet industry standards.

Whether you're migrating from VMware or building a hybrid environment, our team ensures your Azure platform is optimized for performance and reliability. What sets Eide Bailly apart is our client-centric approach, our consultants work closely with your stakeholders to minimize disruption and maximize value throughout the process. You gain more than just a provider, you gain a strategic partner.

Migrate now to stay ahead, not just keep up.

Who We Are

Eide Bailly helps businesses work smarter — financially, operationally, and strategically. As a Top 20 CPA firm with clients in all 50 states, we bring practical expertise in tax, audit, advisory, and technology to improve performance, reduce risk, and support growth.

Is Azure Infrastructure right for you?

Azure Infrastructure is a good fit for your organization if:

- **Broadcom's recent license changes have created pain-points**

- **You are looking for a highly scalable, reliable, and high performing solution**

- **You want to reduce operational complexity in maintaining on-premises server environments**

- **You want predicable server costs that eliminates large cap-ex server refresh projects**

Azure for the Now and the Next

Our Azure experts will ensure your transition from VMware to Azure infrastructure is seamless and stress-free. We design a tailored migration and infrastructure to support your unique needs. With Azure, you will be able to:

- Scale resources to meet demand
- Secure data with advanced protection tools
- Save costs with flexible pricing models
- Access global data centers for reliability

The Azure Advantage

✔✔ Centralized management of cloud resources

✔✔ Flexible scaling for evolving business needs

✔✔ Advanced security across global infrastructure

✔✔ Real-time insights with analytics tools

✔✔ Comprehensive access and permissions controls

✔✔ Seamless integration with Azure services

Implementation Process

Initiate
We start with a scheduled kick-off call with your team for introductions, general requirements , and expectation setting.

Plan
We'll work with you to run an full Azure migration assessment on your environment to validate Azure suitability, recommend optimal sizing of VMs, estimate costs, and plan for networking.

Execute
First, network connectivity will be established between your office(s) and/or users to Azure, then, server workload migration can begin at your pace.

Go-Live
During migration and after go-live, we will provide you with support, assistance, performance validation, and cost-saving options.
