# PayNow on Azure

**PayNow** is a complete end-to-end payment system that is considered a strategic product for merchants. It allows customers to use several payment methods that are convenient to a wide range of customers. It is a strong collection tool for merchants through their electronic channels.

**PayNow** is a light, robust, and highthroughput payment gateway, extended with various specific and generic adapters to trusted third parties such as Master/ Visa Credit Card Payments, (Saudia Arabia) SADAD Payment Provider, (Saudia Arabia) SADAD OLP Acquirer Bank, PayPal, and capable of integrating with organization internal systems like ERP Accounts Receivable.

**PayNow** comes with a light billing system allows the gateway to create or integrate with existing systems to upload bills/ invoices for later collection process. Moreover, reconciliation process between collection process and bills creation is performed to ensure handling mismatch or missed bills-for-collection.

**PayNow** provides a set of inward and outward integration services that are implemented with various flavors (SOAP or REST) services. This allows maximum flexibility for customers to accommodate the payment gateway in their information system architecture.

Those services takes care of inward services of bills upload, creation, and authorization. This is in addition to outward services, notifications (SMS, EMAIL, INTERNAL ALERT), notify external billing system, update accounts receivables (AR) in ERP systems, etc.
