

The power of one.

Eka sustainability solution

Our cloud solution streamlines your sustainability and ESG programs by providing turnkey visualizations for standards such as GRI, SDG, SASB, BRSR, CDP, and many more. It helps organizations account, report, manage and offset your carbon footprint

Overview

More than 70% of North American CFOs say their company is under moderate pressure from at least one stakeholder group (mostly their employees, customers, and board) to act on sustainability targets. However, about half of CFOs cite no company targets, and about 80% say they do not have plans to establish targets.

Corporate sustainability is subject to a lot of attention but not much clarity. Multiple reporting standards and inconsistent ways of collecting and processing critical sustainability information result in duplication of data collection efforts and limit organizations' ability to gather real-time actionable insights. Eka's sustainability and ESG solution uses preconfigured analytics to make sustainability performance efficient, precise, and timely. We empower enterprises to implement industry best practices to collect the insight required to deepen supply chain collaboration, mitigate sustainability risks, and monitor the strategic use of energy and resources.

Impending regulatory action and increasing investor capital linked to sustainability have made ESG a top risk priority, but organizations lack confidence in their ability to manage it – Gartner

Eka's sustainability solution

Eka's sustainability solution is a cloud-based offering that enables ESG reporting and tracking along with adopting the best sustainability practices across multiple frameworks. The solution streamlines sustainability and ESG programs by providing turnkey visualizations in line with standards such as GRI, SDG and CDP, and many more.

Running on Microsoft Azure, Eka's cloud-driven sustainability solutions offer enterprises the ability to track, measure, and gain meaningful insights across their carbon emissions, supplier relationships, governance, workforce management, and circular economy.

Key Features:

- **ESG Reporting:** Representation of ESG data as per the government standards for compliance and better decision making
- **Carbon Accounting and Offsetting:** Measure and analyze the GHG emissions and identify best possible ways of carbon offsetting
- **ESG Benchmarking and Ratings:** Track and benchmark performance with the industry standards to identify the improvements
- **Supplier Assessment:** Measure the performance of suppliers based on Scope 1, Scope 2, and Scope 3 emissions
- **Sustainability Risk Portfolio Analysis:** Analyze risk management as per leading standards
- **Scenario Creation and AI models:** Provide insights on the ESG goals by choosing an optimistic, pessimistic, and realistic scenario

Novelties of Eka's Sustainability Solution

- Highly customizable and flexible to cut across different standards such as GRI, TCFD, SASB, IR, GRESB, SERC, SDG, CDP, BRSR and many more.
- Standardized data collection and reporting process
- 100+ dashboards and industry-specific insights based on 500+ metrics
- Low Customization time for any new frameworks (2- 7 days) on the low code/ no-code platform
- Easy updating of data from multiple locations using multiple devices.
- Unification of different sustainability processes on a single platform for real-time insights, easier analysis, and quicker decision making

Value Delivered

Eka Cloud Platform

Eka Cloud Platform enables flexibility and agility so that you can stay ahead in ESG reporting and sustainability programs.

Digitize workflows from procurement to payments

Unify e-sourcing, supply chain, trading and risk, sustainability, and treasury services

Multiple solutions on one platform

Improve critical business processes from procurement and sales, supply chain execution, trading and risk, sustainability, and treasury management.

Faster decisions with improved visibility

Integrate single data model embedded within applications for quick action. Make business decisions with actionable analytics tailored by role and industry.

Built on a cloud foundation

Accelerate impact with low-code automation. Simplify and extend integration and access enterprise security to limit the risk of a distributed workforce.

Single open cloud platform

Low code/no code automation

Advanced Analytics

Role based data-driven insights

Mobile engagement, access everywhere

Ease of Integration

Security

Eka's platform complies with industry-standard security guidelines, including SOC 2 Type I, SOC 2 Type II & GDPR. It has single sign-on via industry-standard authentication protocols, encryption of data in transit and at REST, and is integrated with best-in-class DLP, EMM, and archival partners. It has been validated under Veracode Verified Standard status.

“At Microsoft, we believe sustainability is critical to meet the economic, societal and environmental needs of today and the years to come. In the current landscape of multiple reporting frameworks, proactive solutions like Eka’s will support our customers’ sustainability journey. We are pleased that Eka is using the power of Microsoft Azure for its cloud solutions to enable leaders of global enterprises to progress their business strategies and reach their sustainability goals faster.”

– President, Microsoft Asia

Customer Success Story

Global shipping business makes faster and more informed sustainability decisions with Eka's Sustainability and ESG reporting solution

Key Challenges

- Heavy dependency on spreadsheets for its data collection and sustainability reporting
- Multiple systems were used to collect and manage the data across the organization with little integration within themselves
- Data redundancy due to managing reports on multiple frameworks and applications

Customer Objectives

- A comprehensive, user-friendly solution to enhance sustainability reporting on GRI, TCFD, SDG & CDP
- Manage sustainability risks to eliminate time-consuming manual procedures
- Get a unified view of the sustainability data for the top management

Business Solution

Eka's Sustainability & ESG Reporting solution was deployed within five weeks at the customer's head office in Thailand.

With Eka's solution, the customer's sustainability team collected and reported data out of the box for GRI, TCFD, CDP, SDG disclosures, all managed on one single platform.

In addition, a custom-built Sustainability report, including requisite dashboards, was provided, which the company could integrate with different business processes to gain a transparent view of the sustainability across the business and frameworks

Customer Benefits

Over 30 different insights were created in context to cover over 90% of the company's sustainability reporting requirement across qualitative as well as quantitative measures.

- Increased efficiency
- Improved reporting
- Real-time visibility into Sustainability status
- Unlimited growth potential
- Responsible profits

Leveraging Eka's cloud-driven sustainability solution will help us automate key processes related to tracking, measuring, and reporting ESG data with a wide selection of reporting standards and frameworks to address the diverse interests of our many stakeholders
