What is the Data Lake in a Box?

The Data Lake in a Box is a template for the automated deployment of a data platform connecting its users to a host of azure services, fast!

Deploy the blueprint quickly and effectively integrate all you need for your data platform and Data Lake.

Why the Data Lake in a Box?

- ⚙️ Combine all your structured, unstructured and semi-structured data (logs, files and media) using Azure Data Factory to the Azure Data Lake Store
- ⚙️ Leverage your cleansed and transformed data in Azure Data Lake Store and perform scalable analytics with Azure Databricks
- ⚙️ Seamlessly and securely access and move your data at scale between Azure services to combine and create one hub for all your data.
- ⚙️ Build operational reports and analytical dashboards on top of Azure Data Warehouse to derive insights from the data and use Azure Analysis Services to serve thousands of end users.

We're making it possible to deploy an entire data platform with Azure Data Lake integration quickly, on a clean environment, with the right permissions, ensuring maximum data security

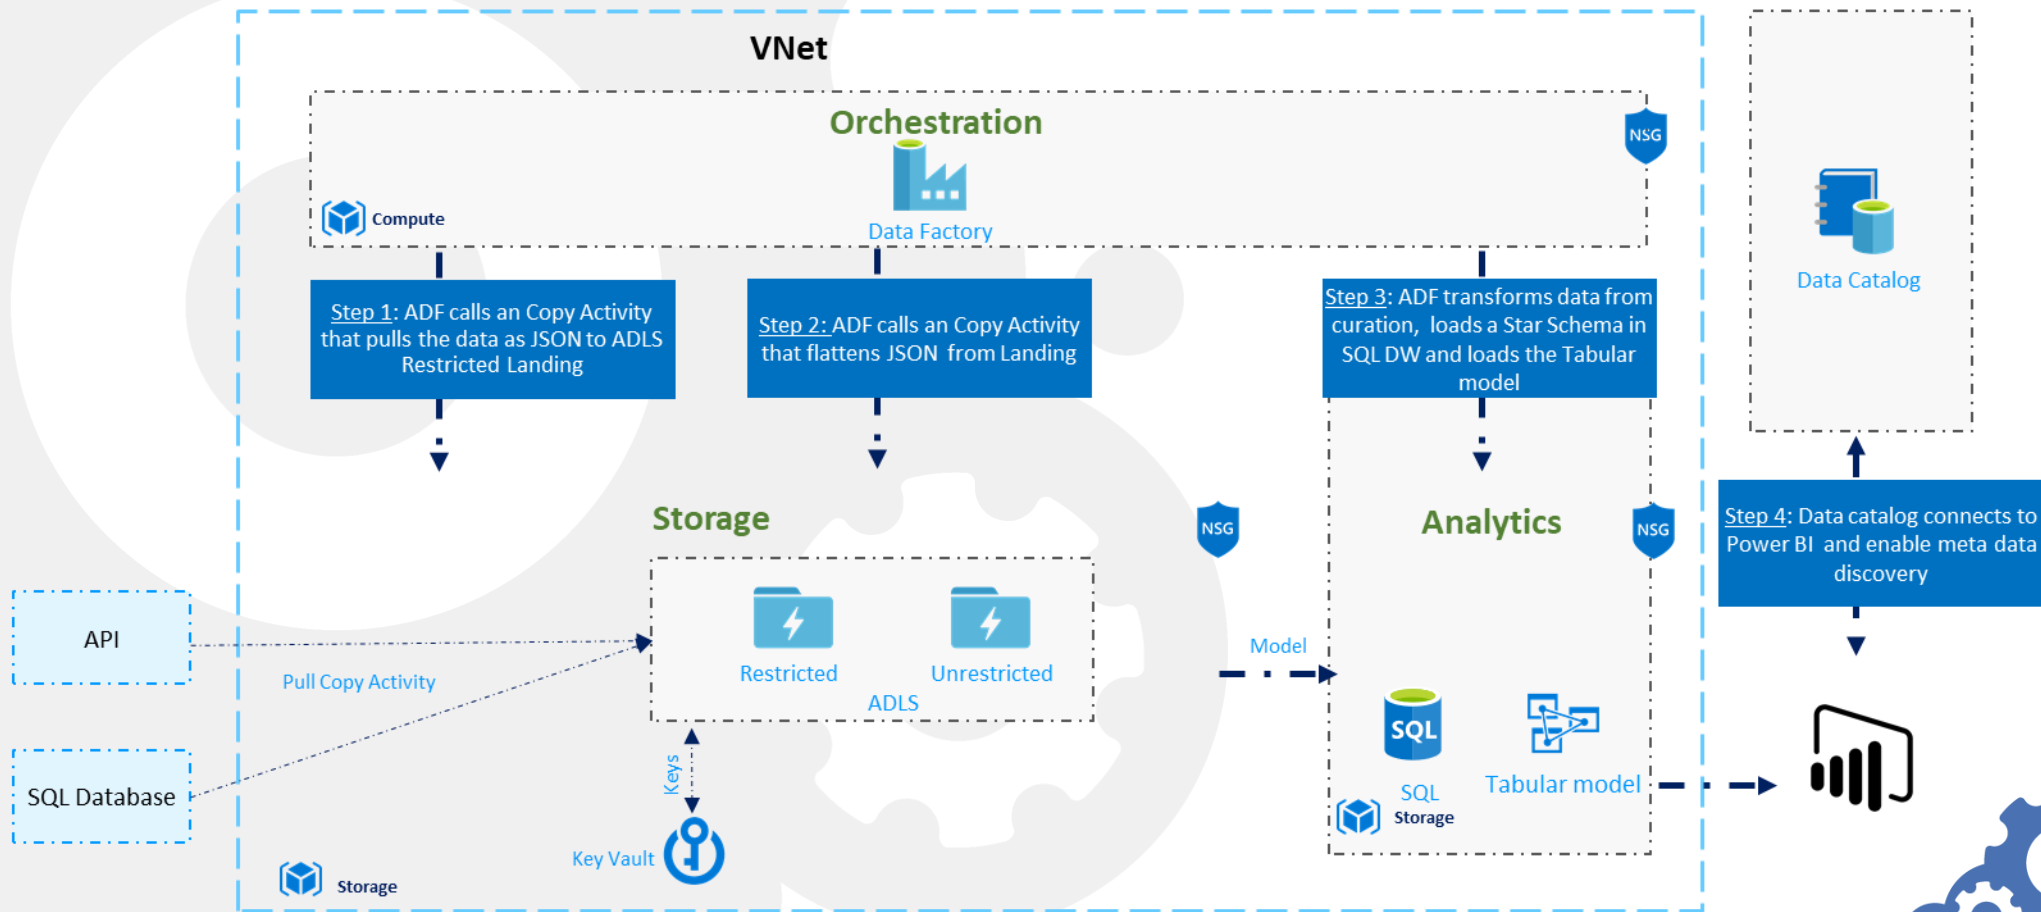

And reducing time from sprints to days!

By utilising this template we can move you further along your journey to your optimal data pipeline and

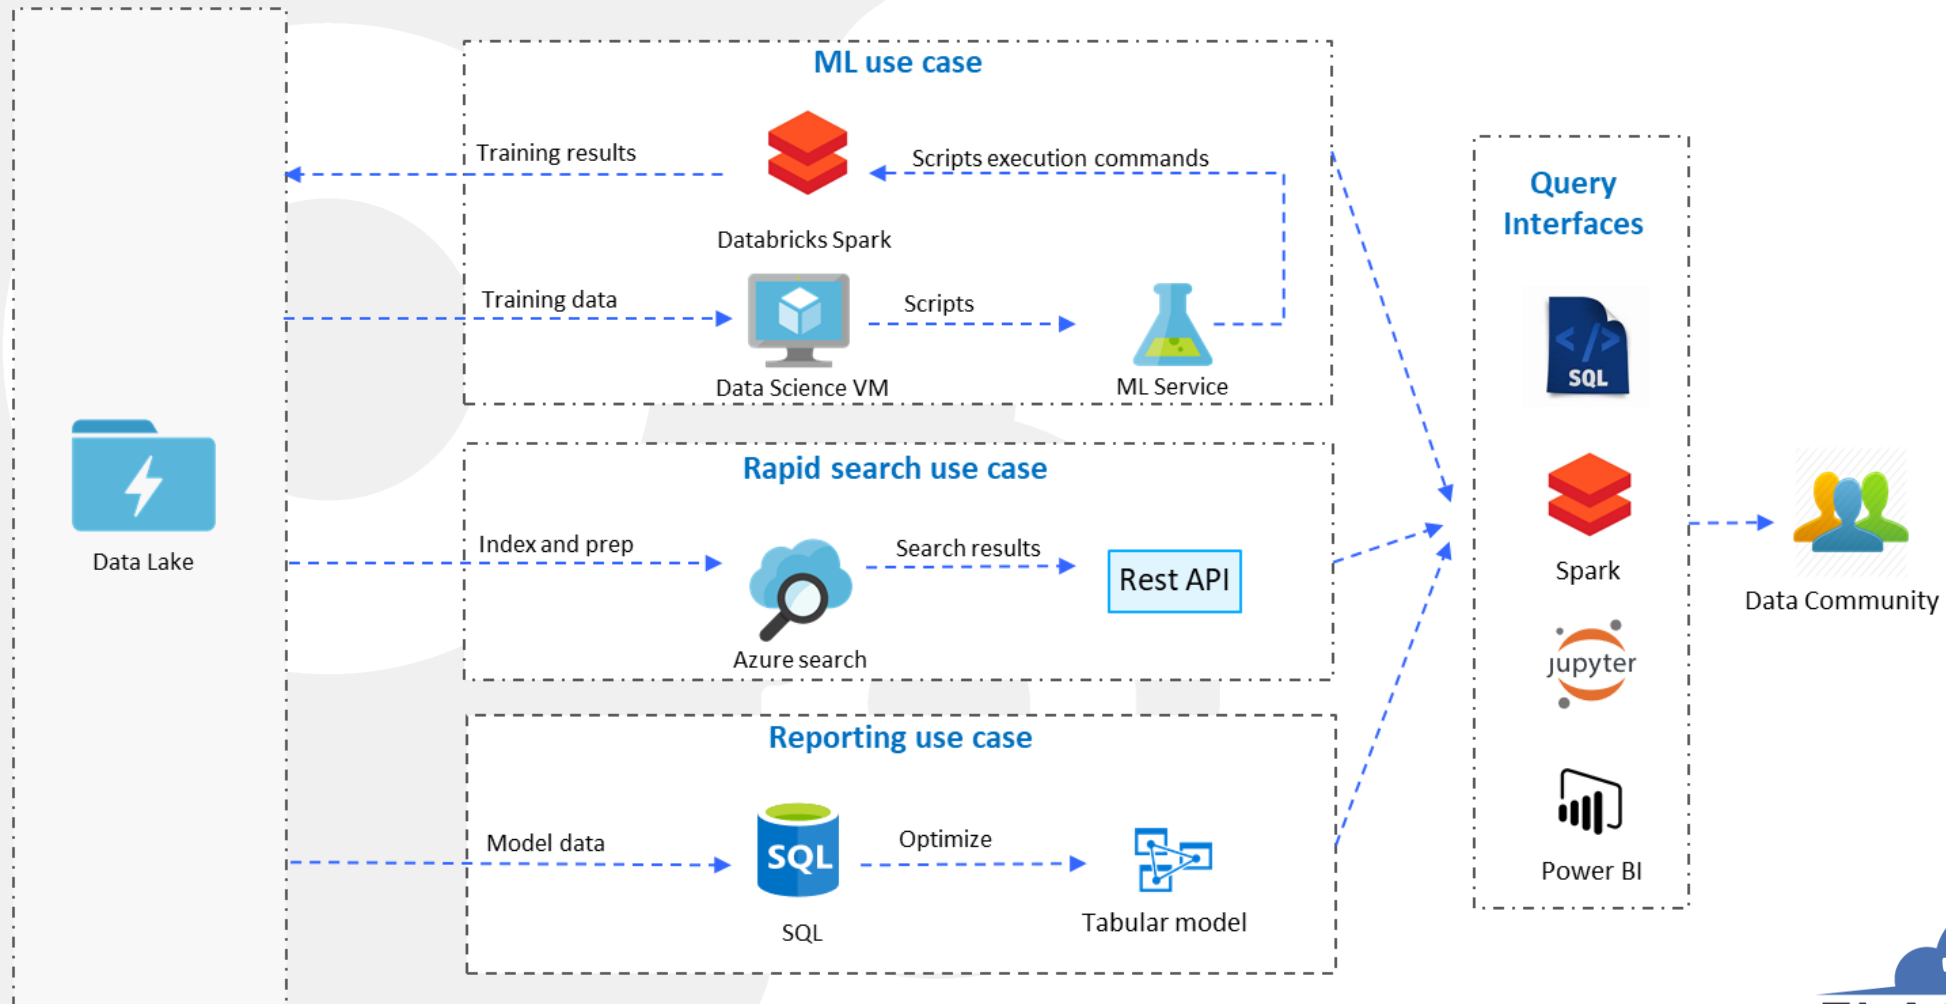

impactful business insights.

A Complete Azure Data Platform Architecture...

...With Rapid Data Availability

A quicker path to the production of your data platform

Accelerate your time to insight

Move faster to discussing your **high value requirements** like Machine Learning and Business Intelligence

Customer Benefits

Reduce effort in architectural design

Get straight to the heart of your **business needs**

Modernise your data analytics with Azure technology
