WHAT IS AZURE VMWARE SOLUTION?

Azure VMware Solution provides you a private cloud that contain vSphere clusters built from dedicated bare-metal hardware based on Azure cloud infrastructure.

Azure VMware Solution is a VMware validated solution with ongoing validation and testing of enhancements and upgrades. Microsoft manages and maintains private cloud infrastructure and software. It allows you to focus on developing and running workloads in your private clouds.

A SUCCESSFUL CLOUD IMPLEMENTATION

Based on the Cloud Readiness Assessment recommendation, we are going to assess your infrastructure in order to implement Azure VMware Solution into Azure (AVS). Allowing you to extend your current network to Azure via an Express Route or a VPN connection. Management tools remain the same as on-premises to simplify the life of your local IT team based on their knowledge.

OUR CLOUD MIGRATION STRATEGY

Our Cloud experts will design the could infrastructure to be ready with Azure VMware Solution.

We will implement an AVS landing zone while complying with your business, regulatory and legal information.

PILOT PHASE

This phase will allow us to validate the technical capabilities and the security expectation of the platform. We are working on different workshops with your different teams (business, network, backup, security) to validate the design.
