

Enabling Cellular IoT & M2M Connectivity

Connectivity Management

Easily manage your connectivity, including tariff profiles, data consumption, remote diagnostics and permissions from a single, easy-to-use platform.

Cloud-Native Connectivity

Our cloud-first technology stack enables easy integration of your business infrastructure and apps with your connected devices.

Global Multi-Operator Coverage

EMnify's multi-network SIM cards can connect to over 540 cellular networks across more than 180 countries.

API Integration

Seamlessly integrate connectivity management into your applications and automate your business processes.

Secure Network Environment

The latest security updates and practices ensure only your business can view data moving to and from your devices.

Rapid Deployment

Lower total cost of ownership while speeding up time-to-market.
