Microsoft Azure Windows Virtual Desktop

COVID-19 PRODUCTION PILOT FOR FIFTY USERS

Many organisations are considering remote work as one of how to respond to a worst-case scenario where a company or government decision result in a significant number of people unable to work from their office. People might be unable to work from their offices as a consequence of the shutdown of public transport, schools or large city areas.

How can your organisation be prepared for these events?

Empired has developed this rapid-start offer to implement a production pilot of Microsoft Azure Windows Virtual Desktop (WVD) for up to 50 users.

Microsoft Azure Windows Virtual Desktop is a new service on Microsoft Azure that could be one part of your emergency response plan. With Microsoft Azure Windows Virtual Desktop, you no longer need to be concerned with the constraints of the physical hardware or a person's location. Virtual desktops can be quickly provisioned based on users' profile and be available through the Windows, Web, Android, macOS or iOS clients – even if your people cannot access the office.

Project scope

The production pilot includes a requirements workshop with our specialist consultants, who will create a high-level design of your solution. Based on this design, the team will create the WVD tenant and the required assets. The outcome will also include a Windows 10 Master Image with up to five core applications, dynamic scaling policies and scripts, as well as Azure Multi-Factor Authentication, enabled for extra security. All of this will be documented, so your team can always refer back to the project.

What will you achieve?

Your company will be able to rapidly adopt the Microsoft Azure Windows Virtual Desktop platform, enabling you to respond to urgent demand for remote work resources quickly.

SOLUTION BENEFITS

Rapid adoption

- Ready for use within weeks

Secure

- Your data stays within Microsoft Azure and it is not saved to personal devices
- Multi-Factor Authentication included

Unlimited Scale

- Your data stays within Microsoft Azure and it is not saved to personal devices
- The 50-user pilot can be extended to thousands of users with very little extra effort
- Numbers can be scaled back down when staff return to the office

How can we help?

Our team have dedicated people across Australasia who have successfully implemented Microsoft Azure Windows Virtual Desktop.
