

Streamline Realise: Power Platform

START SMALL, DREAM BIG & DELIVER FAST!

Learn how to drive innovation and improvement using the Power Platform across your organisation, while at the same time ensuring constancy, implementation of standards and good IT governance.

If you have business users actively creating content on the Power Platform and need a structured way to monitor, manage and control how and what content is created, then our Streamline Realise: Power Platform offering can help you.

The Power Platform, by design, is putting low-code to no-code business tools in the hands of business users. These tools can easily become a challenge to manage in your organisation if kept unchecked.

Streamline Realise: Power Platform is a service that allows you to work with our team of experts who can educate your team on the tools available to monitor activity on the Power Platform while facilitating the process of setting up your very own mini centre of excellence to gain insight into adoption, establish audit and compliance processes and nurturing the ideas of your business users.

Who can benefit from Streamline Realise?

Streamline Realise can be of help to organisations in the initial stages of establishing a Power Platform footprint or those who are already well entrenched in the capability but need some help in managing it. This means we can engage with your team to help give you the ability to monitor and manage your Power Platform environment effectively.

Streamline Realise is a targeted, timeboxed and specific service, that allows you to be introduced to the best practice principles of Power Platform governance.

The process

Streamline Realise assumes your team already has a base understanding of the components that make up the Power Platform. It aims to give your team some specific knowledge, guidance and supporting assets through a series of facilitated workshops to gain understanding and setup the tools necessary for these activities.

The workshops will help with:

- Understanding governance and best practices, architecture, core capability, platform limits and licensing, security, data loss prevention strategies, sharing content, monitoring, deployment and application lifecycle management.
- The setup of core components to sync all your resources into a central space to get more visibility of the apps, flows and creators that exist in your environment.
- The enablement of the governance components to establish some base audit and compliance processes for your apps.
- The setup of a collaborative area allowing you to share best practices and templates and onboard any new creators to your Power Platform innovation space.

Implementation scope and benefits

The project includes two full days of classroom style training to cover the following topics: components, architecture, environments, Common Data Service, platform limits, connectors, on-premises data gateway and licensing, security, DLP, sharing, management and monitoring, deployment, solutions, versioning and ALM.

Two full days of facilitated, practical labs that take your people through the setting up of some base monitoring, audit and compliance capabilities and a collaborative area allowing you to share best practices and templates and onboard guides in your Power Platform admin environment.

The Approach

- Collaborative process approach
- Knowledge building and transfer
- Implementation of some base governance tooling for your organisation

The Power Platform

- Your data stays within the Microsoft Azure Cloud platform, with no data stored on personal mobile devices and controlled user access, including multi-factor authentication
- Rich design capability with a re-usable component-focus
- Support for no-code technical environment
- Easy integration with other platform and data providers e.g. Microsoft Office, SharePoint, Dynamics 365, Teams, MailChimp, Jira, Marketo, SAP and more
