

It's time to modernise your ERP

HERE ARE SOME SIGNS YOU NEED TO MODERNISE YOUR ERP

- Significant effort is required to move to the latest version or even receive a bug-fix
- You are duplicating some transactions in multiple systems
- Your systems aren't compliant with statutory or industry regulations
- You can't easily work remotely as an individual or team
- Your current interface is confusing or cumbersome
- Your system isn't scalable with business growth
- It is costly and difficult to extract information from your current systems
- Customisations add complexity and cost to the upgrade process
- Your current system doesn't allow you to drill down to the source of the transaction

With the right enterprise resource planning (ERP) system, your business can grow. But if you're stuck with an old system, you could be missing out on insights and capabilities that could drive your business forward.

If any of these signs ring true then you should actively consider modernising your ERP, however you need to make sure you go about it the right way for optimum results.

The value of a platform approach

A platform approach dramatically reduces cost and complexity and lets you achieve the best, most integrated solution for your business.

By leveraging the Microsoft stack, you can access state-of-the-art ERP functionality alongside extensions that make it even more powerful. Plus, you can access productivity solutions such as Microsoft Office and additional services like the Azure cloud and built-in security tools.

Introducing Microsoft Dynamics 365 Business Central and Finance & Operations

Microsoft has released two new all-in-one business solutions. Business Central is ideal for small and medium-sized businesses, while Finance & Operations is perfect for larger, more complex enterprises. Underpinned by powerful business and productivity tools that put all of your business operations at your users' fingertips, these solutions are set to revolutionise the way you view ERP systems.

How we can help you modernise your ERP

To determine your best upgrade path to a modern ERP system, we can conduct a business solution assessment for your organisation.

Microsoft Dynamics 365 Finance & Operations	Microsoft Dynamics 365 Business Central
<p>Ideal for global and large enterprises, Finance & Operations is perfect for businesses that operate in multiple jurisdictions with various currencies and compliance requirements.</p>	<p>Perfect for small to mid-size organisations where rapid time to value is an imperative, Business Central helps you get an overarching view of your business for better performance.</p>
IT HELPS YOU	IT HELPS YOU
<ul style="list-style-type: none"> • Manage your financial processes faster, and deliver robust reporting • Make smarter business decisions through integrated, powerful business intelligence that yields predictive insights and real-time information • Ensure global compliance with a flexible, guided, rules-based chart of accounts, dimensions, and global tax engine • Streamline procurement processes to reduce cost and gain greater control • Scale to support growth of the company and business complexity • Reduce expenses and increase control with process automation, budget control and approvals • Protect data and support GDPR compliance with built-in security measures • Manage recruitment, onboarding, and core HR tasks through the Talent module • Improve inventory management with centralised product management, advance warehousing capabilities and demand planning • Optimise manufacturing processes, scheduling and capacity planning with real-time visibility for both process and discreet manufacturing organisations 	<ul style="list-style-type: none"> • Leverage automation tools, such as OCR supplier invoice scanning, to deliver user productivity gains • Reduce the flow of paper through the business with system managed workflows, approvals and notifications • Meet specific business needs without heavy, cumbersome customisations, using Power Apps to extend Business Central and deliver point functionality to specific user groups • Avoid application version lock-in through Microsoft managed, automated updates and upgrades • Make informed decisions with built-in Power BI dashboards • Streamline your financial processes while staying compliant with reporting and regulatory requirements • Manage project financials, including revenue recognition and WIP valuation, more efficiently • Comply with GDPR and privacy legislation • Work in the cloud or on-premise, or in a hybrid deployment • Leverage productivity tools such as Microsoft Office 365 with an unprecedented level of integration 'out-of-the box' • Achieve a strong return on investment with a simple, low-cost licensing model

We have worked with hundreds of businesses to take advantage of the Microsoft stack to solve challenges across the business, not just ERP-related. We're a member of the Dynamics Inner Circle, which means we're in the top one per cent of Microsoft partners worldwide.

Put simply, we know Microsoft. That means you'll get the best, most cost-effective solution available. Talk to us today.
