

Build your customized Copilot from ideation to implementation in 6-8 weeks

Copilot

co·pi·lot - a qualified pilot who assists or relieves the pilot **but is not in command**

The democratization of Artificial Intelligence (AI) and Machine Learning (ML), as well as the emergence of Large Language Models (LLMs) such as, GPT(Generative Pre-trained Transformer), are poised to transform the technology landscape and a new wave of AI systems.

Generative AI & LLMs can help to automate repetitive tasks, make data-driven decisions, and provide better customer service. Large language models like GPT-4 trained on vast amounts of data, enable them to provide accurate and relevant responses to a wide range of queries.

Copilot is a generative AI assistant that can be integrated into a host of applications like MS Teams, mobile apps, web apps, and more to assist knowledge workers in accessing business information to improve productivity.

During the 6–8 weeks engagement, our AI experts will empathize with your product managers and ideate on how to build and integrate a Copilot tailored to your organization utilizing Generative AI and LLMs.

Duration

- 6-8 Weeks

Agenda

- Client Introduction & Business Overview
- Empathize with stakeholders to understand the areas where to utilize Generative AI / LLMs
- Identify possible use cases
- Ideate on the design and user experience
- Finalize the scope for POC
- Responsible AI principles
- Unit test the solution
- Review & Signoff

Deliverables

- Working MVP of Copilot with code deployed to client Azure subscription
- Architecture Diagrams
- Deployment Scripts & Documentation

Cost

- \$15,000 - \$20,000
