

Fabric workshop

Explore this game-changing analytics platform in our 2-hour workshop

Why

You are challenged with data silos, faced with choices about competing technologies, and want confidence in the answers about organisational performance. You need to do something but are not clear on the first steps. Surely there is funding available for getting started? Check out this offer.

How

In this 2-hour workshop Enlighten specialists will work with you through a structured process to create the first cut of a plan for moving forward with Fabric. Includes a demonstration of the product in use, and coverage of funding available to complete a Proof of Value project and Deployments.

What

We will step through these topics:

- Discovery and value drivers
- Solution tech and architecture
- Roadmap exploration
- Co-create next steps plan

Fabric platform

Explore business value with this game-changing analytics platform

What

Microsoft Fabric brings together everything you need – data engineering, data science, real-time analytics, data warehousing, and business intelligence – in one seamless platform. Fabric provides a central space with different fabric items and workloads accessible in a workspace. And strong ROI.

How

No more cobbling together different tools like separate Azure Data Factory pipelines or managing complex Azure Synapse environments. Fabric cuts through complexity and delivers insights faster. It includes familiar components like Power BI and allows interaction with semantic models.

Why

For businesses, this means making smarter decisions with confidence and AI support, without managing complicated systems. Your staff, from data professionals to end users, can work together on trusted data directly and in familiar apps like Excel, Teams, and Power BI.
