Ensono Flex Cloud Engineering

Deliver Value Faster with a Team of Agile Cloud Experts

Make better happen

ensono.com

As companies continue with their digital transformation to meet the demands of a digital economy, a shortage of cloud talent has become a challenge to meeting business objectives. With this deficit of cloud talent, organizations are looking at ways to satisfy an increased demand on resources to enable continuous improvement and maturation of their clouds. By augmenting cloud engineering, IT organizations can focus on recruiting for their primary business needs.

Maximize your Journey to the Cloud with Ensono Flex Cloud Engineering

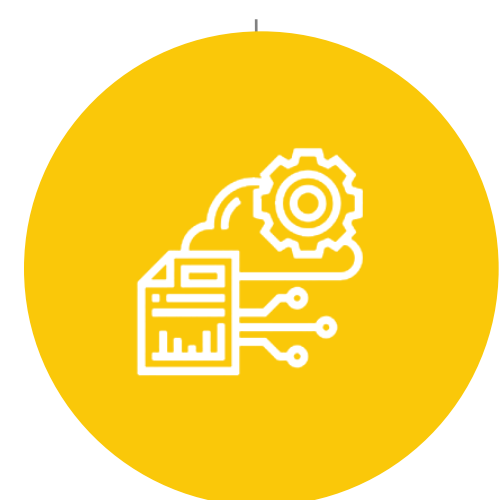

Ensono Flex Cloud Engineering manages the skill gap between your current resources and your cloud project backlog. It provides access to advanced cloud capabilities through Ensono agile engineering teams. To deliver benefits as early as possible, these teams work in line with DevOps principals, using Agile project management with Sprints to tackle your backlog. We drive your teams to higher levels of automation, repeatability, and self-service capabilities.

Capabilities

IT organizations have access to a dedicated team of experts who deliver on four core capabilities that are critical in today's mature cloud environments

Agile Management: Agile helps drive discipline and iterative approaches. We shorten the lifecycle of projects and provide continuous solution delivery. This faster approach also better aligns with changing and evolving business requirements.

Cloud Platform Engineering: Leveraging our technical cloud patterns and practices, to design and implement a project that results in new or improved cloud capabilities. With a codify-everything approach, we want our clients to reach higher levels of automation maturity, repeatability, and self-service capabilities.

DevSecOps: Modernizing Client teams into more agile and high-performing collaborative teams must include the right capabilities that address elements of company culture, automation and shift-left security, procedural and policy development, performance measurement systems, and organizational structure; beyond CI/CD pipelines alone.

Containerization: Containerization includes a wide range of activities software teams need to manage a container's lifecycle, including provisioning, deployment, scaling (up and down), networking, load balancing and more.

90%

90% of organizations are currently facing cloud -related skills challenges. Cloud skills present a persistent barrier to IT initiatives" (451 survey 2022)

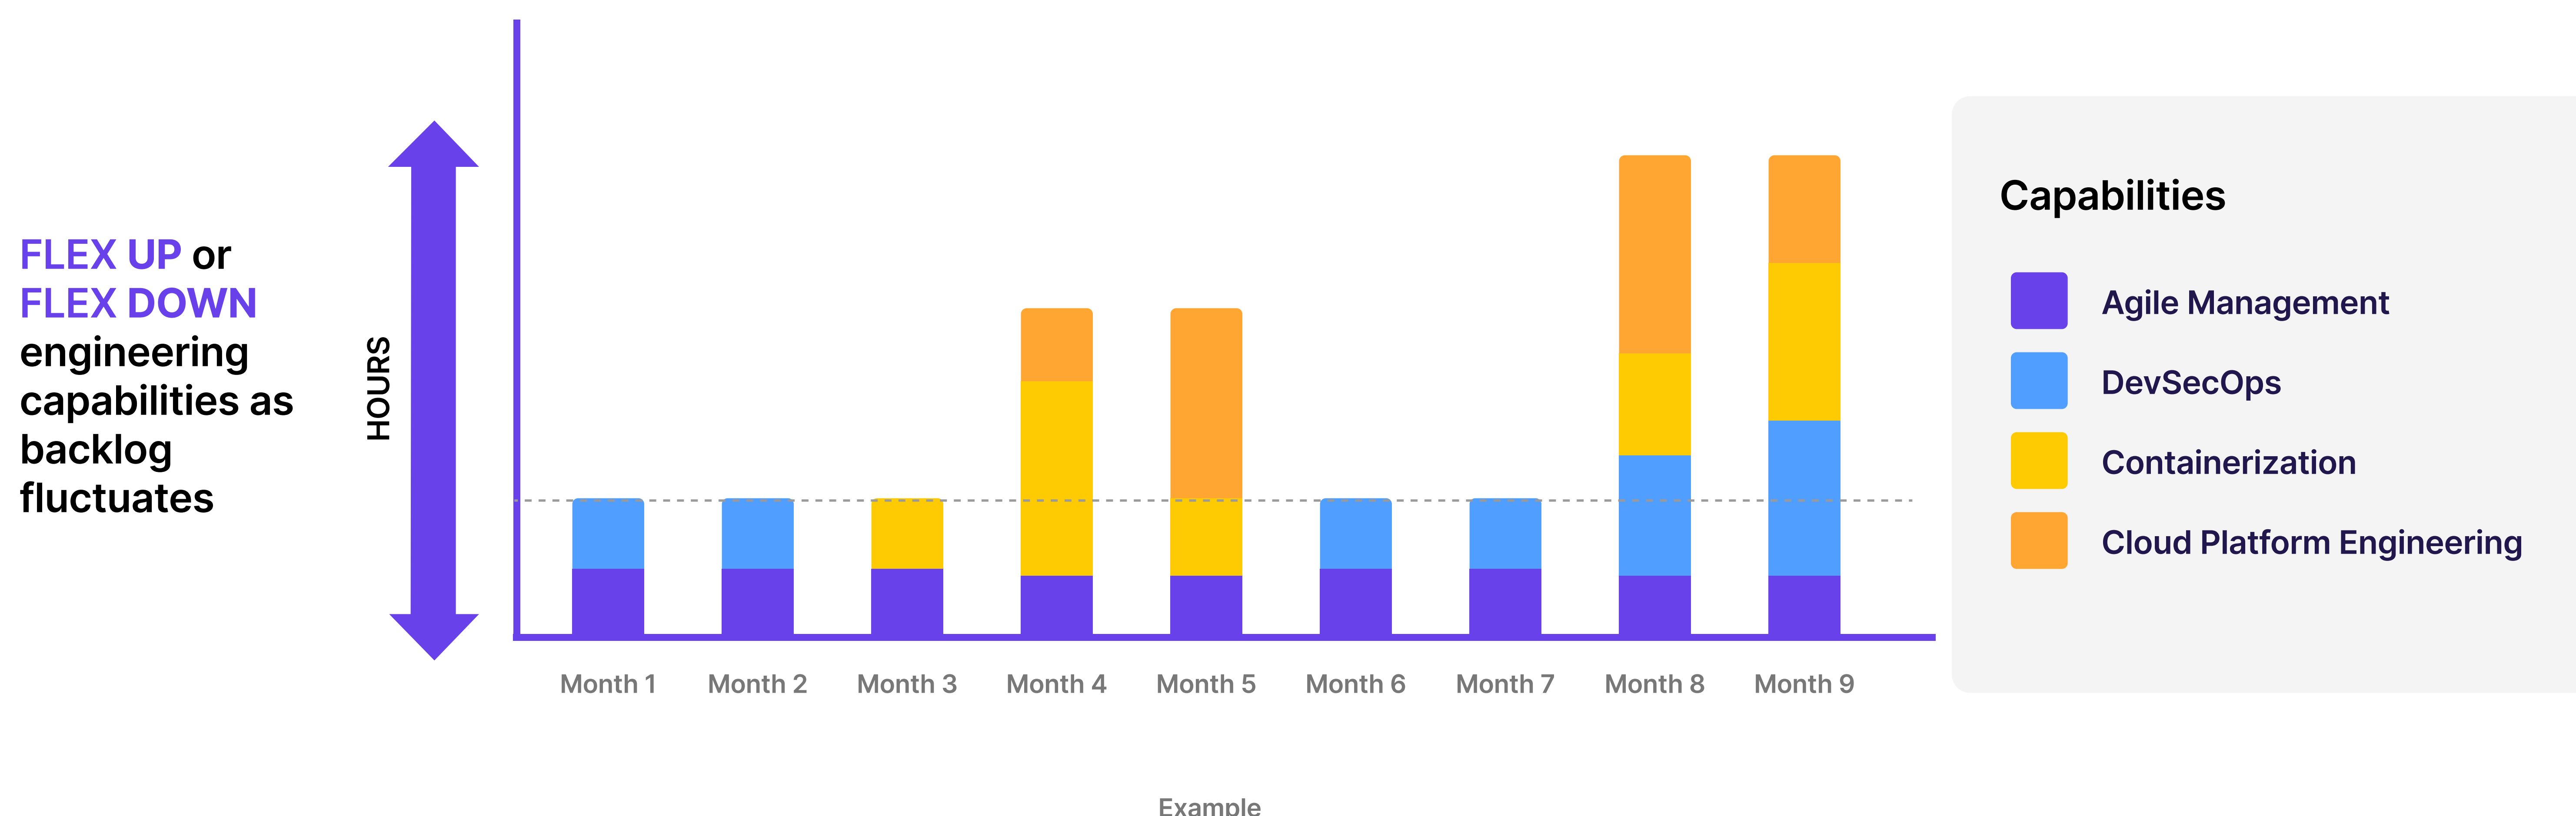

60%

Percentage of the tasks of traditional IT skills which will become insufficient through 2022, leaving IT leaders lacking. (Gartner 2022)

41%

The biggest barrier to enterprise DevOps adoption is technical complexity. (451 survey 2021)

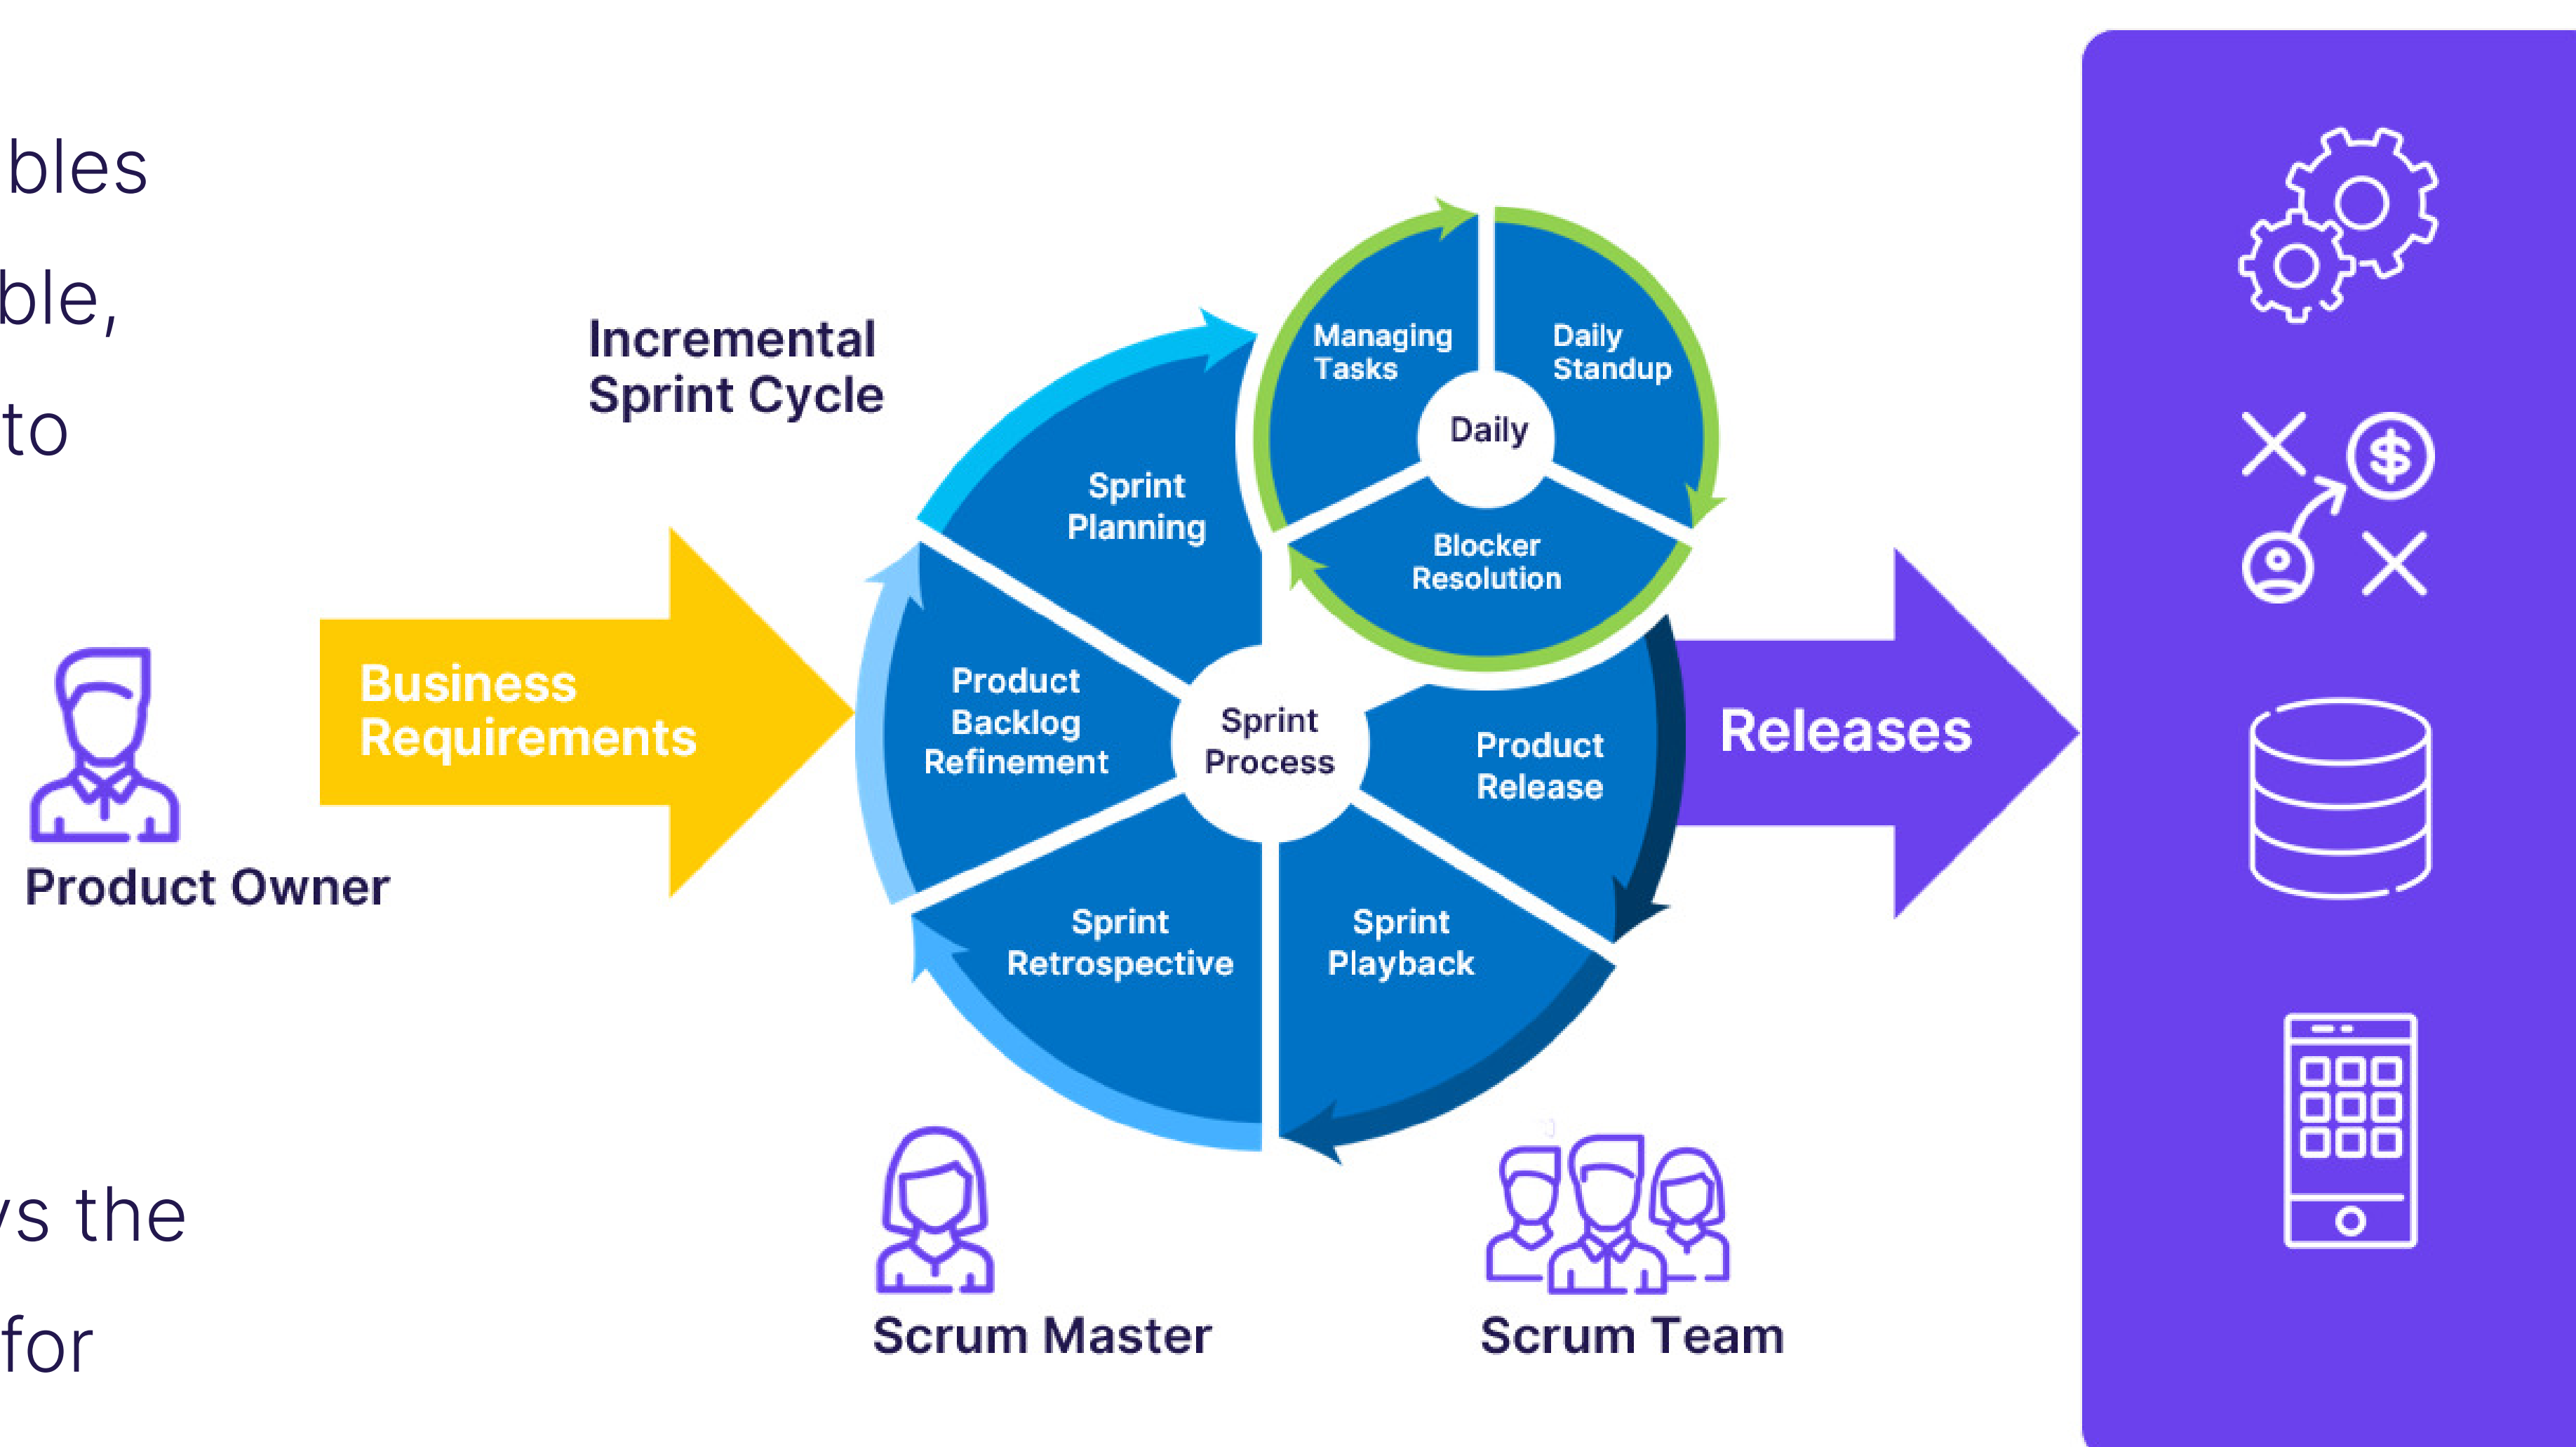

We supply the right talent on demand, for each capability, so you are always ready to scale to meet business requirements but only pay for resources being used. We provide access to a wide range of engineering capabilities and resources that adapt to your dynamic backlog —adjusting hours up or down as needed. With Ensono Flex Cloud Engineering, your organization becomes more agile and flexible, so you can unlock the true value of the cloud.

Approach

To deliver results as quickly as possible, Ensono Flex Cloud Engineering uses Devops methodologies to shorten the lifecycle of projects and provide continuous solution delivery. This faster-paced approach also better aligns with changing and evolving business requirements.

It starts with a Discovery phase, where we will collectively identify a list of prioritized deliverables into the product backlog. Within each deliverable, we work in an Agile methodology with Sprints to release to production as soon as possible. During each Sprint cycle, Ensono works on the product backlog items in a prioritized manner, ensuring value items are delivered first. At the end of each Sprint, the team communicates what has been built and deploys the solution to a testing environment (if available) for quality assurance and feedback.

Ensono provides hybrid services for all mission critical platforms.

We can meet you wherever you are in your digital transformation journey, with 24/7 support when you need it.

We are your relentless ally, flexing with you when challenges emerge.
