

Registered User-Based Licensing

Overview

Registered User-Based Licensing takes into account **the number of active users**, specified by your business, for using the **ERP.net platform**.

For example, instances of **ERP.net Express** editions are licensed under the **Registered User-Based** licensing.

License terms

This licensing model permits a certain number of **active users**, described in the paid subscription plan. These users are able to log in and use **ERP.net platform** at the same time.

Your business can create and store a practically unlimited number of **inactive user accounts** in your ERP.net platform.

After reaching the **permitted number of active users** for your subscription, any **additional accounts** you create can only be set as **inactive**.

NOTE

You can **easily switch** which users are **active** in your ERP.net platform's interface. Changing an active user to inactive frees up a slot. This slot can be used for another inactive user to be set as active.

Additional information

Per-user sessions

Editions that are licensed on a **registered user basis** allow **all of your active registered users** to use the ERP.net platform **simultaneously**, as long as everyone is accessing the platform **through a single session**.

A single session is brought up and active when a user is accessing **ERP.net platform** via either:

- ERP.net's **desktop client**
- ERP.net's **web client** through a **single browser** of choice

on a **single device at a time**.

Multi-session access

Accessing **ERP.net platform** by the same user via **multiple desktop clients, browsers, operating systems, and devices** is also possible. This is a **multi-session access**.

NOTE

Multi-session access is available for your users on the condition that **the total number of active sessions at a time does not exceed the total number of registered users whose accounts are set to be active**.

Learn more about single and multiple sessions

You can learn more about ERP.net's **single** and **multi-session access** from the following resources:
