

Fimple Form Reader

www.Fimple.app

- Automatically read data from hand-filled forms.
- Keep copies of your forms in Fimple and use its advanced search capacity to find your forms when needed.
 - OR Extract your data into a spreadsheet (download or copy/paste)
 - OR automatically load into a database – ideal when part of your operation is run online but part remains paper-based.
- Delivered as an online application (software as a service) so no setup required – just sign-in.
- Easily setup your own form templates or use templates provided for you by your services provider. Multi-page templates supported.
- Automatically identify most data issues – e.g., where a field that should be filled was left blank. Basic field validation of common data types such as dates, credit card numbers, social security numbers, checkbox groups etc. easily implemented when setting up your form template.
- Review forms online after they are read with a copy of the form on one side of the screen while editing the as-read values on the other side of the screen. If a user edits a value the change is logged, and a record of the log is easily viewed.
- Attachments supported – they will appear when reviewing forms as a paper-clip icon on the form page scanned before them.
- Scales from one person to multiple teams spread across an organization with advanced security. Just add users and teams as you need.
- Your data is only viewable by the people you specify and can be deleted (by you or your authorized representatives) at any time.
- Group your forms into batches and add batch level information for your searches and data management.
