iviva

Smart Spaces.

Connect. Integrate. Interact

Technology is evolving and improving rapidly every day but organizations have failed to keep up with this change. Disconnected systems throughout the workplace hamper efficiency and productivity, impacting business outcomes.

iviva Smart Spaces is a future-proof technology platform that unifies your disconnected physical spaces to create connected smart environments where people can flourish. Interactions are simplified for fluid and natural experiences, and collaboration is joyful and effortless.

iviva makes life better by connecting experiences and centering the environment around you. Every interaction becomes natural and fluid so you can concentrate on frictionless collaboration.

Digital transformation of Spaces

We are on the brink of a rapid and substantial change in the workplace, driven by numerous trends. Organisations are challenged by seemingly disconnected systems and fail to respond to change and deliver business outcomes. iviva Smart Spaces is a game-changing technology platform that enables the digital transformation of spaces within buildings and facilities.

Connect

the physical world (spaces, assets, sensors) and digital world (cloud software, social network, BIM) onto a single unified platform.

Integrate

these disconnected physical and digital entities to enable user journeys.

Interact

through rich and engaging experiences. Boost employee engagement and digital agility, and exploit consumer-oriented technologies.

A Future Proof Platform to Connect Disparate Systems

Organisations need a strategic future-proof technology platform to respond to new trends and challenges. iviva works with the systems you already use. iviva is designed to grow as your needs grow, for your peace of mind.

iviva Smart Spaces connects disparate systems such as IT systems, control systems and IoT devices through APIs and industry standard open protocols. The solution includes a library of connectors to popular systems and devices for rapid deployment. It also provides an SDK to build new connectors to support cutting-edge technologies as they are introduced to market.

iviva supports connectivity to a wide range of systems over open protocols or proprietary APIs/SDKs.

- Building Management Systems (BMS) over BACnet, Modbus, OPC etc.
- IoT devices
- Access control systems
- Lighting systems
- CCTV and video analytics
- Active Directory for user management
- Microsoft Exchange
- Crystal Reports

Please get in touch for a full list of supported integrations.

iviva

A frictionless flow from start to end.

With iviva, everything falls naturally into place. Your backend and frontend needs are connected and in sync, constantly engaging and exchanging information so people and processes work in harmony.

Enable Seamless User Experiences

iviva provides powerful tools to enable seamless user experiences and interactions across multiple touch points such as mobile, tablets, digital signage and large format touch displays.

iviva
anywhere

iviva provides a suite of native mobile applications to deliver highly engaging and responsive end user experiences. Our apps connect, integrate and interact with your environment, enabling daily operations for both employees and visitors.
iviva
smart wall

iviva Smart Wall provides a game changing technology framework to intelligently deliver personalized user experiences, create interactive kiosk applications and advanced visualizations on large format touch screens.

iviva
platform

iviva provides a comprehensive suite of applications to manage your workplace and environment. Customizable dashboards, alerts, processes and notifications are available to all users. Applications all work together and dissolve into the background, until you want to call them up from wherever you are.

iviva
gateway

Bringing in over two decades of expertise in connecting together your physical and digital world, iviva can integrate with a plethora of enterprise systems, traditional BMS systems and IoT devices to create deep connections and fluid interactions between people and their environment.
