Code Name: Kalon

we are evora

Evora is a dynamic technology solution provider specialising in data solutions across the Microsoft Business Intelligence technology stack.

Our focus is on delivering fit-for-purpose support & solutions to small and medium enterprise.

For over a decade, we are proud to be preferred Business Intelligence and Analytics partner at many Australian and multi-national health services.

healthcare challenges

accountability & compliance

ability to track compliance with Statement of Priorities targets in supporting strategic decision-making and accountability

lack of visibility

limited data visibility hinders timely, effective decisions in hospitals, leading to inefficiencies. Integration enables proactive, prioritised patient care.

cost barriers

high costs in staffing, technology, and maintenance make building a hospital data platform challenging, requiring long-term investment and resources.

build value

- provide assurance of compliance to health care service standards
- uncover underlying performance risk factors that may indicate emerging risks to future performance
- measure performance trends, manage effectively and improve patient outcomes
- holistic view of performance indicators with full confidence in its integrity

introducing codename: kalon

interactive dashboard

interactive operational and analytic dashboards available anywhere, on any device

performance targets

your health service's activities overlaid against Australian statutory health indicators, business rules and your own targets

lowest level of detail

information at the lowest level of detail giving greater visibility and flexibility to identify and remedy patient care activities at-risk

regular updates & features

regular updates that reflect changes in Australian health services standards, policies and trends

any where
any device

technical features

power bi

recognised by Gartner as the visionary leader in analytics and business intelligence platforms for 2018, 2019 & 2020

integration

integration of your health services' patient management software

analytical platform

future-proof analytical platform paving the way for artificial intelligence

product road-map

horizon one

referrals dashboards

specialist clinics dashboards

inpatients dashboards

elective surgery dashboard

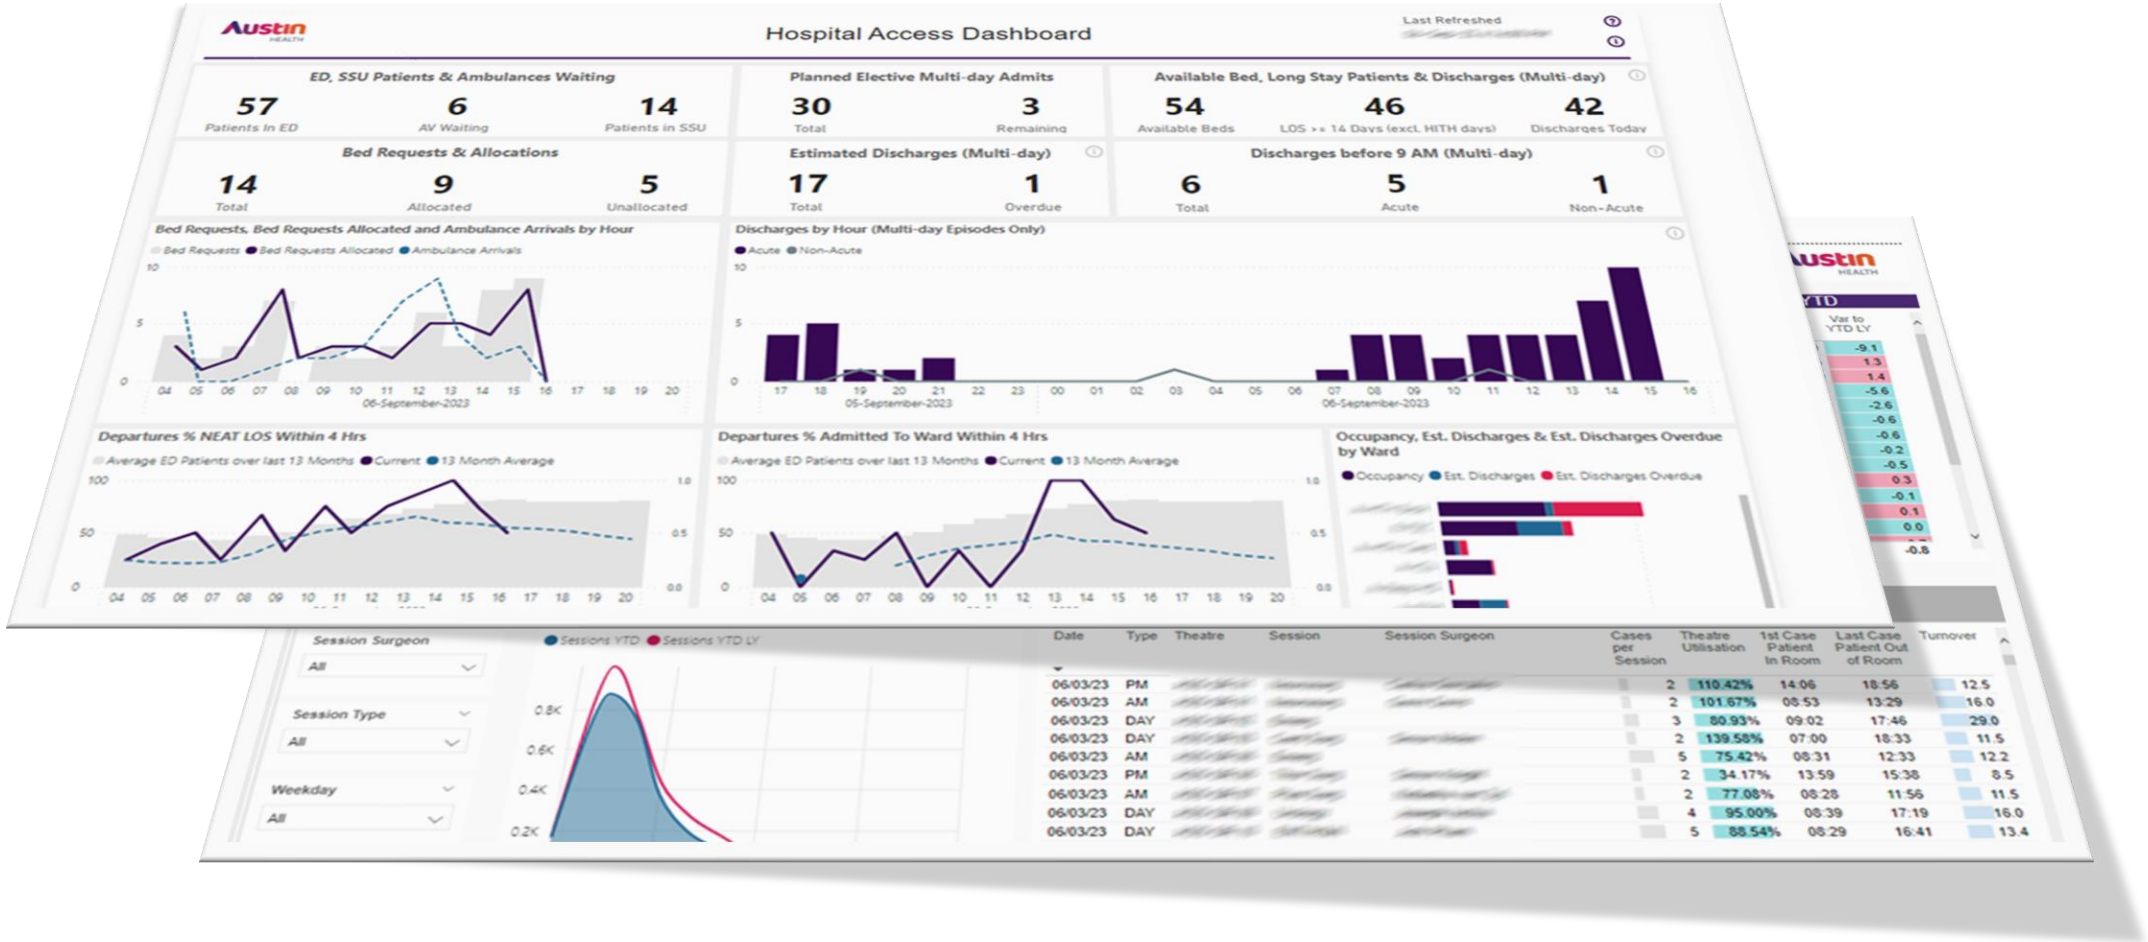
Austin Health



Evora partnered with Peter Mac to successfully deliver a BI performance reporting tool, that met management expectations and exceeded business utilisation from day one. Evora's understanding of how health works enabled a smooth translation to an insightful and powerful BI platform.

Rosemarie Chetcuti

Strategic Advisor, Business Intelligence

Peter MacCallum Cancer Centre

Peter MacCallum Cancer Centre

Our work with Evora was a turning point in the hospital's ability to deliver and improve our service offerings. Partnering with Evora's experienced consultants helped us evolve our business reporting from a collection of static reports to a highly interactive, dynamic BI platform. Our BI platform is now relied upon by Executives as well as clinical and administrative managers as a single source of truth to reflect business performance, forecast future activity and identify trends and patterns which have directly led to service improvement. Evora's technical expertise and health sector knowledge were critical to achieving high levels of data integrity and the successful integration of data from multiple sources into an enabling and insightful BI platform. Through the use of the BI platform we were able to plan activities which reduced our patient waiting lists and waiting times, improved theatre and clinic utilisation, reduced consumable costs and staff leave liabilities as well as many value adding ad hoc projects. I would highly recommend the services of Evora for their data expertise, industry experience, tailored advice and continued support and dedication to superior client service delivery.
