

Unlock the Future with  
AI Assistant  
Empowering Your Business with  
Intelligent Solutions

# AI Assistant Solution

The AI Assistant application helps with communication and resolving various requests, analyzes organizational needs, utilizes existing data, and provides relevant answers based on training

1. The AI Assistant integrates with Teams for seamless communication or can be deployed as a standalone browser solution for added flexibility.

2. The service is hosted in Microsoft Azure, which ensures efficient processing, information retrieval, and hosting with 99.99% availability.

3. Security is ensured through encryption and strict authentication protocols to protect sensitive information, so the data never leaves the tenant.

**4.** The solution is built on LLM models with added voice control functionality (input and output) in more than 100 languages.

**5.** No other neural model is trained on customer data, ensuring its complete integrity and protection against misuse.

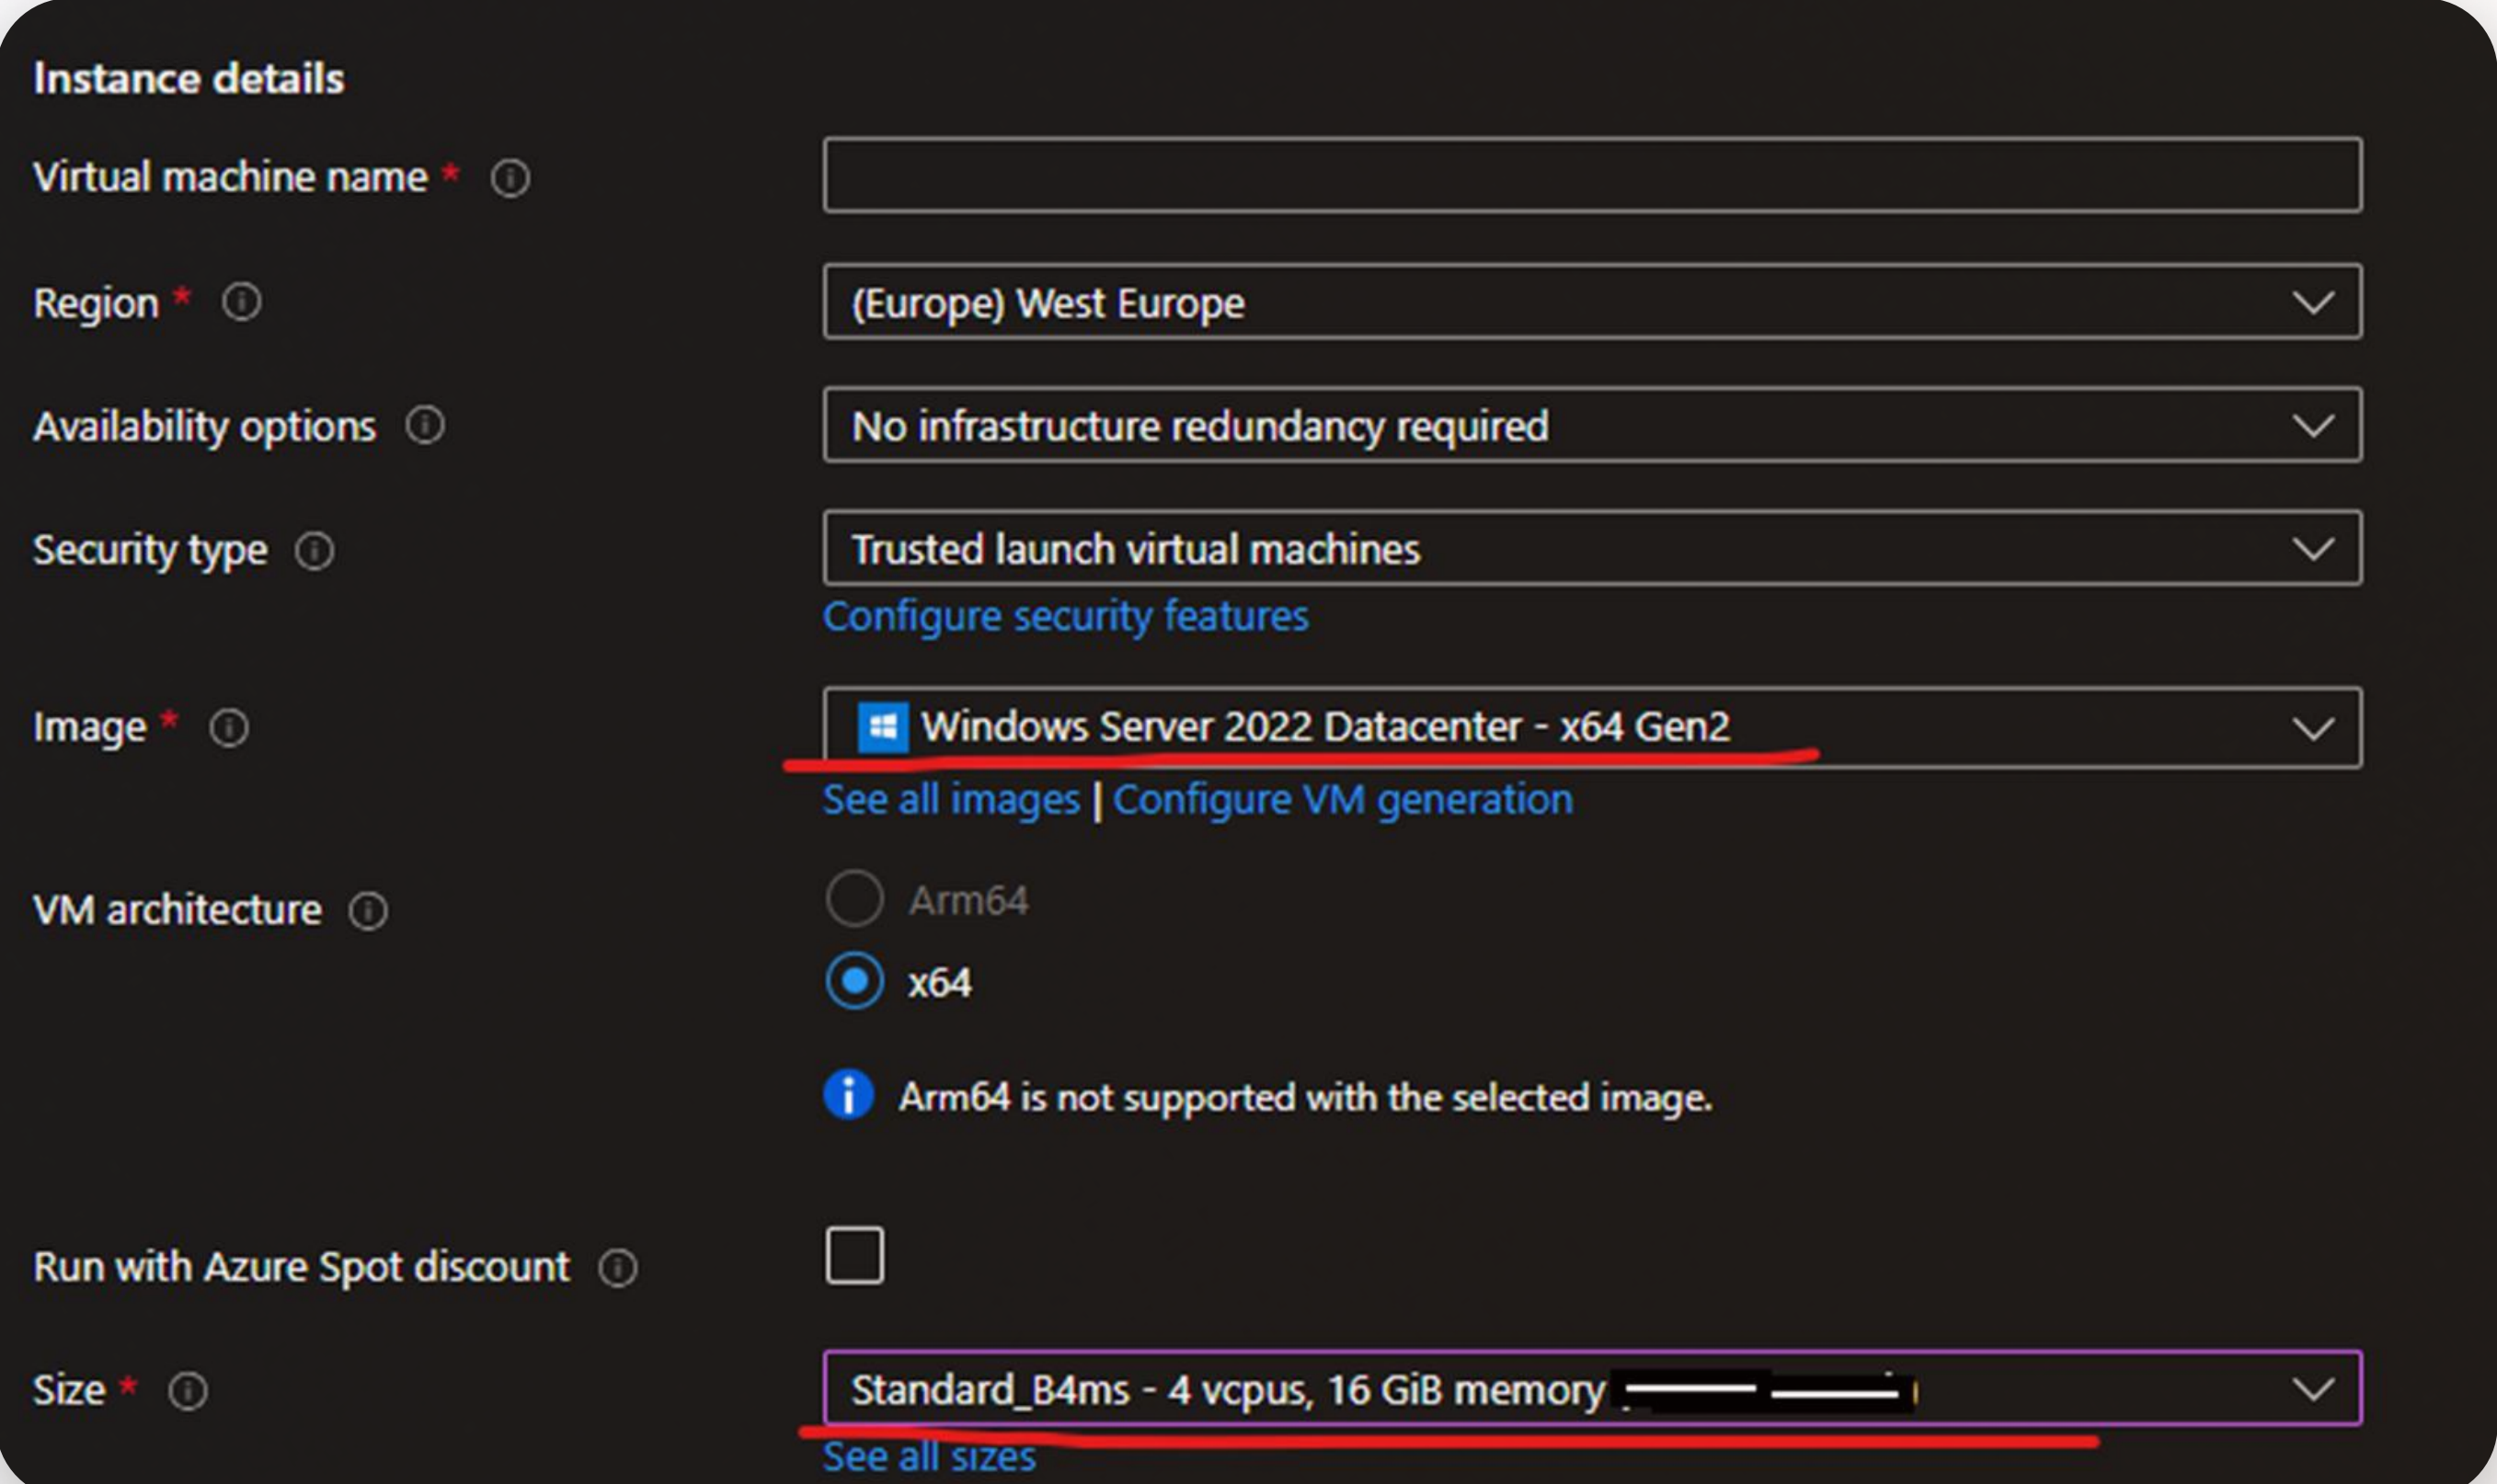

**6.** The system can also be connected to BI data analysis and can be expanded with additional data sources as needed.

# Placement of Individual Parts of the Application from a Cloud/On-premise Perspective

# The Azure Virtual Machine environment requirements are as follows:

- OS: Windows,
- 4vCPU,
- 8GB RAM,
- 200GB SDD

The screenshot displays the 'Instance details' section of the Azure portal. The configuration is as follows:

- Virtual machine name:** [Empty text box]
- Region:** (Europe) West Europe
- Availability options:** No infrastructure redundancy required
- Security type:** Trusted launch virtual machines
- Image:** Windows Server 2022 Datacenter - x64 Gen2 (highlighted with a red underline)
- VM architecture:** x64 (selected, highlighted with a blue circle). An information icon indicates 'Arm64 is not supported with the selected image.'
- Run with Azure Spot discount:** [Unchecked checkbox]
- Size:** Standard\_B4ms - 4 vcpus, 16 GiB memory (highlighted with a red underline)

Additional links include 'Configure security features', 'See all images | Configure VM generation', and 'See all sizes'.

# Capabilities of the AI Assistant

## 1 HelpDesk

The AI assistant automatically responds to common IT-related questions, categorizes incidents, and provides 24/7 support.

## 2 Internal Guidelines Access

It provides quick access to internal guidelines and rules, enables efficient search, and keeps users informed about updates.

## 3 Integration with Internal Systems

The assistant allows users to submit and track requests for business trip approvals, vacation requests, and integrates with internal systems,
