

SmartStart for Microsoft Copilot

A free, 30-minute readiness check of your Microsoft 365 environment – uncover data exposure risks, align Teams and SharePoint permissions, verify licensing, and get a clear, step-by-step roadmap for a seamless, secure rollout of Microsoft Copilot with optimized collaboration, AI accuracy, and enterprise-grade protection.

Why Executech?

At Executech, we've helped hundreds of organizations maximize their Microsoft 365 investments by combining deep technical expertise with a people-first approach. We understand that AI success depends on secure, well-structured data and proper governance. Our team works alongside you to uncover risks, streamline permissions, and prepare your environment so Microsoft Copilot delivers accurate, secure, and meaningful results from day one — without disrupting your operations.

What's Included:

- **Security & Permissions Review** – Check Teams, SharePoint, and OneDrive access controls.
- **Data Exposure Scan** – Identify sensitive files that could surface in Copilot results.
- **Licensing Verification** – Clarify E3/E5 plans, add-ons, and deployment options.
- **Tailored Rollout Plan** – Ensure a smooth, safe Copilot launch with no surprises.

Who This Is For:

- Microsoft 365 Admins
- IT Managers
- Business leaders eager to roll out Copilot safely and effectively

Why It Matters:

Copilot is only as smart as the data behind it. Without the right setup, you risk exposing sensitive information and losing trust in your AI tools. **Common pitfalls include:**

- Rising maintenance costs from legacy servers and hardware
- Security and compliance gaps from outdated systems
- Inflexible infrastructure that can't scale with growth
- Unpredictable costs from piecing together co-lo, backups, and firewalls

With SmartStart

Gain control, visibility, and a secure foundation before enabling Copilot — and avoid costly mistakes.
