CloudReady® for Office 365

MONITOR THE **ENTIRE OFFICE 365 SUITE.**
FROM EVERYWHERE.

End-to-End Visibility for **ALL of Office 365**

Exoprise CloudReady is the only solution for monitoring your **entire Office 365 deployment.** CloudReady enables you to find and fix performance problems *before they affect* your end-users, assess and optimize your network for capacity, detect changes, and improve operations for your entire business. With CloudReady you'll know about outages instantly — before Microsoft knows itself.

CloudReady provides full coverage for **all of the Office 365 protocols and applications.** Deploy sensors across branch and cloud locations to model different topologies, network conditions, and scenarios for always-on monitoring, continuous early detection and end-to-end network visibility.

Network Intelligence for ALL of Office 365

For real-time troubleshooting and long-term SLA benchmarks, no other tool covers your SaaS like CloudReady. Easily deployed from a cloud-service, you get comprehensive end-to-end monitoring for your most mission-critical cloud apps and services.

- → Self-service deployment in minutes
- → Instant visibility and pre-configured alarms for detection
- → Customizable dashboards
- → Integrates with your existing management systems

Your Cloud Apps. Your Locations

- → Monitor your key locations
- → View changes to the applications or Network Path Performance
- → End-to-end, cross-server coverage for Single Sign-On, ADFS, Azure AD
- → Identify the faulting LAN, WAN, access point or Internet Service Provider

Enterprise Use Cases

Plan Your Office 365 Deployment

Your networks, proxies and SSO capacities will always change. Test and optimize Office 365 capacity and routes before and after changes are made.
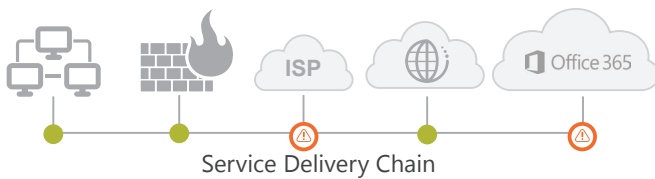

Proactively Monitor Office 365 End-to-End

Know about problems **before they impact your users.** Find out even before Microsoft does and react quickly with deep diagnostics.

Troubleshoot Issues, Any Location

CloudReady is instantly deployed to any branch office or network topology. CloudReady runs alongside any workload, any Windows® device or VM.

Benchmark Your Organization

Crowd Data Analytics™ enable you to see your network performance compared to others. Determine if the problem is yours, the ISPs, or the providers.

Service Delivery Chain

Take Credit, Pinpoint Problems

User satisfaction depend on the performance and availability of the network between you and your cloud providers. CloudReady provides node-by-node performance data for your LAN, WAN, ISPs and cloud providers.

→ Identify problems anywhere along the *service delivery chain*.
→ Diagnose multi-server issues across your proxies, Single Sign-On clusters, Directory servers and more.
→ Detect and see impacts of ISP route changes.
→ Measure relative performance of each network hop.

Office 365 Sensors - Complete Coverage			
	Exchange Online		Skype Audio Sensor
	Exchange ActiveSync		Skype Message Sensor
	Outlook Web App		Skype Receiver
	Exchange MAPI over HTTP		Azure Bandwidth
	SharePoint Online		Azure VoIP
	O365 Portal		WebLogin
	Active Directory		DNS
	Active Directory Federation Services (ADFS)		RDP, Citrix, RDS
	Yammer		Okta
	Microsoft Teams		Your Sensor Here
