# Exoprise Solutions Brief

MONITOR YOUR CLOUDS. YOUR LOCATIONS.

## Digital Experience Monitoring

Digital Experience Monitoring focuses on optimizing the business-critical performance of end-user facing applications and services. Exoprise CloudReady covers the full spectrum of end-user and application performance management, instantly deployed from a secure SaaS platform.

- Complete coverage for ALL of Office 365
- Synthetics+RUM for any SaaS/Web app
- Instant crowd-sourced benchmarks
- End-to-end visibility for any transformation

Detect • Diagnose • Optimize • Fix

## Cloud Network Transformations

Network transformations require a re-invention of the enterprise fabric. Business demands for agility and speed have never been higher. Transformative technologies like SD-WAN and Software Defined Networking offer tremendous benefits:

- Improved network and application provisioning
- Accelerate branch office application performance
- Improve distributed cloud security
- Reduce costs

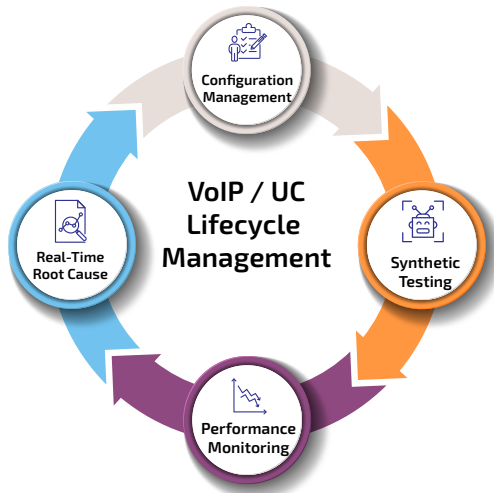

### Application Visibility Required

The benefits from networking upgrades can't be had if end user experience suffers. Application visibility before, during, and after network changes is required. Exoprise offers complete solutions for synthetic transaction and real-user monitoring in one readily deployed SaaS solution. Get instant application visibility from a free trial.

## UC and VoIP Monitoring

Unified Communications, Collaboration and VoIP solutions are pervasive and mission-critical to most enterprises today. They also remain difficult and complex to manage, monitor, and ensure acceptable service levels.

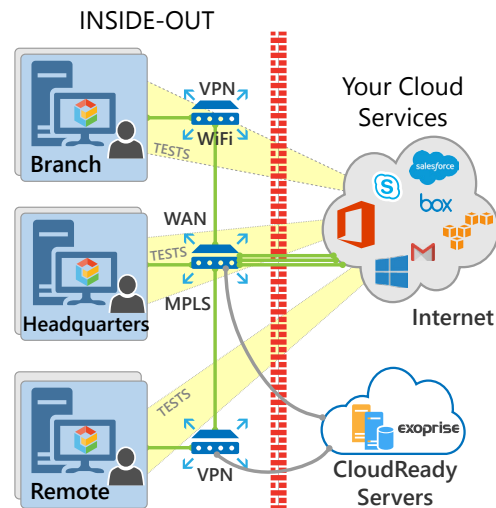

The shift to cloud-based Unified-Communications-as-a-Service (UCaaS) offerings like Microsoft Teams, Slack and Skype for Business makes it even more difficult to diagnose. Use Exoprise CloudReady for:

- Proactive real-time troubleshooting for Teams & Skype
- Visibility into unowned networks, ISPs, and the Internet
- Synthetic testing for immediate change feedback
- Crowd-sourced benchmarks for MTTR reduction

## Complete Coverage. Any SaaS App

Exoprise CloudReady is the leading solution for visibility into mission-critical SaaS solutions like Office 365, Salesforce, GSuite and more. Know about cloud outages immediately — even before the providers know themselves.

CloudReady is self-service driven, deploys instantly, and offers immediate actionable insight with its crowd-sourced, crowd-powered networking and application benchmarks. See how you measure UP with CloudReady.
