Building a concept and roadmap approach covering all technical & organizational impact to your company

3

Step 3

Workshop about the concept and roadmap approach for you company

Experts Inside Enterprise Security & Compliance Workshop & Microsoft Enterprise Mobility + Security (EMS)

Understand how Microsoft protects you from IT security risks. In the workshop we will work with you on your scenarios and map them to the features in the Microsoft Cloud to protect and alert you.

Require multi-factor authentication for guest access

Require guest users perform multi-factor authentication when accessing your company resources.

Require compliant or hybrid Azure AD joined device for admins

Require privileged administrators to only access resources when using a compliant or hybrid Azure AD joined device.

Use application enforced restrictions for unmanaged devices

Block or limit access to SharePoint, OneDrive, and Exchange content from unmanaged devices.

Customer success: Managed Security based on Microsoft Security Stack

- [Industry] High-Tech
- [Employees] 9,300
- [Duration] 4 months

WIN RESULT 1

"It is not only important to identify and limit risks for us in economic terms. This also applies to our IT systems", explains the customer's management to us.

WIN RESULT 2

"Today and in the future, it is no longer just a matter of detecting and removing a virus or malware on a laptop. Increasingly complex and sophisticated malware and attacks must be detected and prevented in a holistic approach." - This is how the CISO frames the key challenges for the new IT security solution.

Channel partner success:

The IT security setup is no longer dependent on whether access is via the company firewall or a company laptop is used. The company now has control of the requirements for the modern working world and especially the challenges with HOME Office and mobile working. Solutions from various vendors have been consolidated into a holistic approach.

Microsoft 365 Defender solutions

Alerts from Microsoft 365 Defender, Defender-for-Endpoint, Defender-for-Identity and Cloud App Security lead directly to action

End users

End users are notified when there has been an incident on their device and are offered solutions and assistance directly and automatically

SOC

The SOC can work in detail and proactively and, if necessary, use the "Hunting" function to analyze in detail what has happened, how malware has spread in the company and what actions are needed to eliminate them
