kunjani

Serious Play

A **performance-enhancing** add-on to upskill, onboard and engage remote teams using blended learning games.
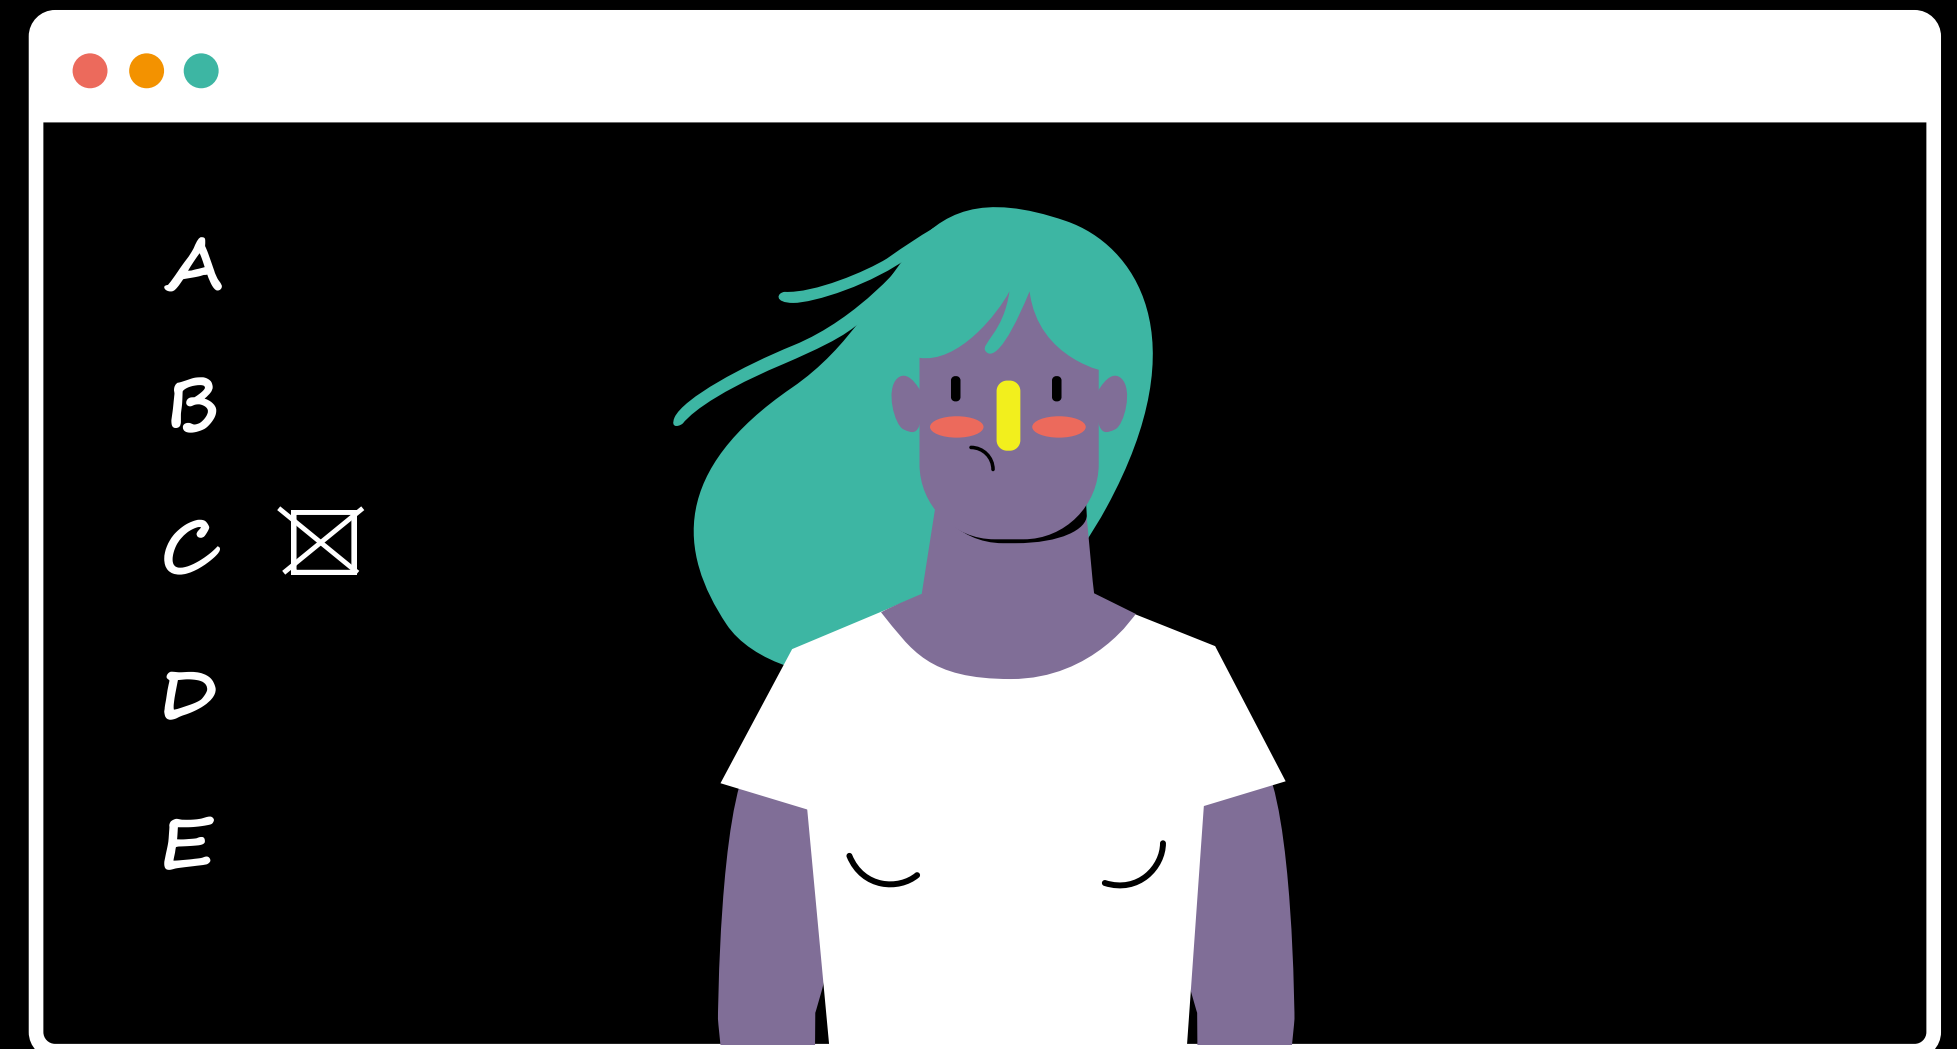

Problem

Meet James

James is required to attend online meetings and training. His heart sinks every time. The sessions are boring - Zoom fatigue deluxe. James is fed up with the endless power points. So he turns his video off and goes for coffee.

Meet Sarah

Sarah the facilitator, is required to do all her sessions online. She tries to make it interesting, but talking to an audience that is mostly switched off, without any feedback makes her feel like she may as well be talking to a blank wall. She hates it.

James & Sarah are not alone

85%
of employees are unengaged

21st
century skills are not developed with lecture format

99%
of facilitators rely on PPT

Knock-on cost of disengagment

18%
lower production

15%
less profitable

37%
higher absenteeism

Our idea is simple
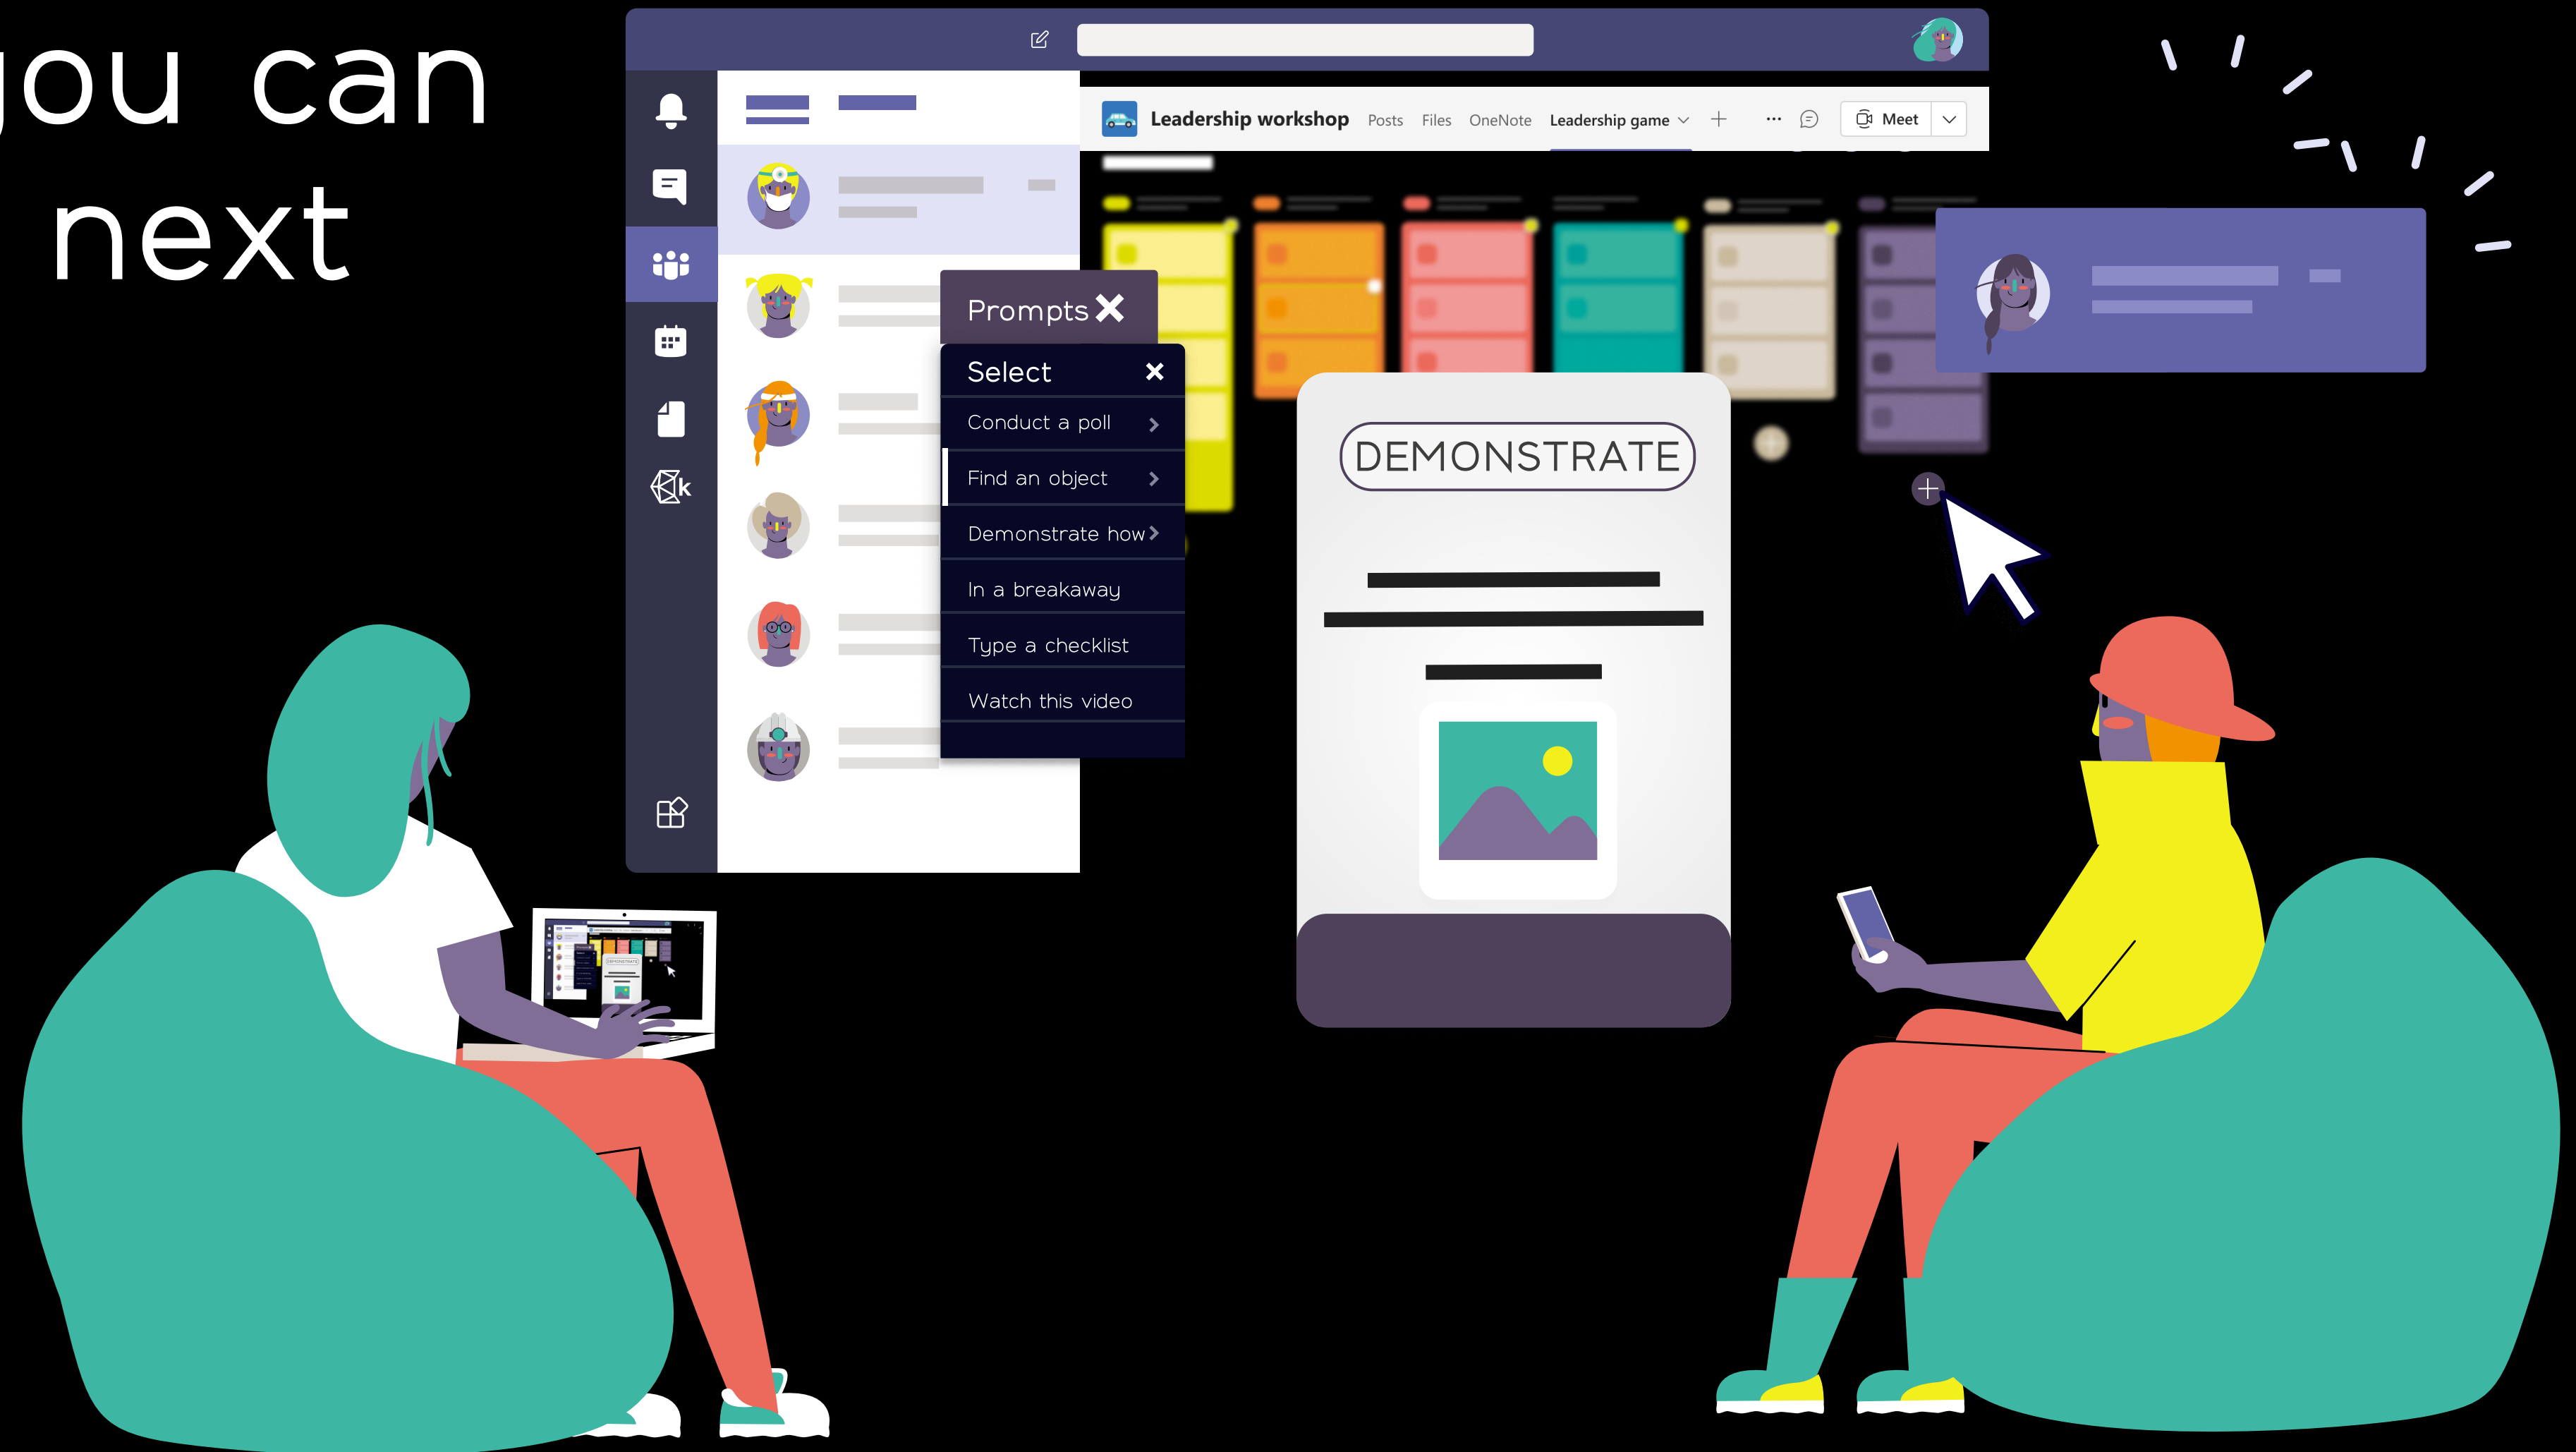

Kunjani combines online meeting systems and blended learning games.
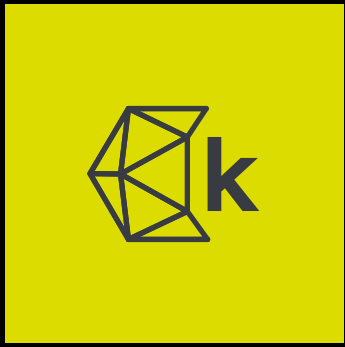

In minutes you can gamify your next meeting

Solution - Design

Create

Before a meeting, Sarah can create her own Kunjani deck on a topic of her choice. She is inspired by the carefully crafted prompts.
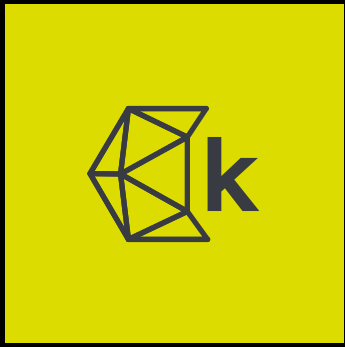

Customise

Alternatively, Sarah can browse the public library for a suitable deck to customise according to her needs.

Maximise engagement

Earn points with their response

Complete activity on card

Team rolls dice

James and his collegues join a Teams call with Kunjani automatically embedded. There are points, time limits and interesting activities to fuel the fun.

Accelerate learning

The Kunjani dice is loaded with suits that have been created to accelerate learning and stimulate different parts of the brain. James' preferred way of receiving and sharing information is addressed.
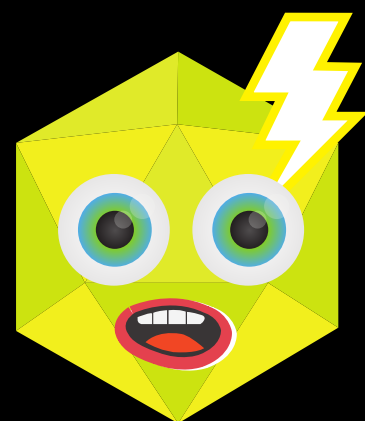

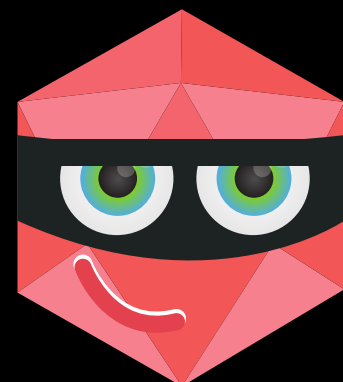

**JOLT**

	✓	✗	✗	✗

**Learner variability is a term to describe all students who enter the classroom and bring with them a unique constellation of abilities and experiences that matter when it comes to learning.
**Whole brain learning is a model of learning where learners learn a concept by using both parts of the brain and not just left or the right brain

1000's of empowered employees
