THE FACTORY PLATFORM

The Command Center for Software Development

CUSTOMER PAIN: The biggest challenge in enterprise software development isn't writing code—it's navigating dependencies, outdated documentation, shifting priorities, and fragmented planning. AI coding tools have improved code generation, but the real opportunity lies in transforming the entire software development process.

SOLUTION: Factory unifies all of your engineering context (from GitHub, Notion, Linear, Slack, Sentry, etc.) and empowers product and engineering teams to collaborate with autonomous AI systems to complete end-to-end work. Enterprise organizations are using Factory to accelerate everything from bug-fixing and coding to PRD creation, release automation, migrations, and more.

KEY BUSINESS OUTCOMES:
- 2-4x faster feature development cycles
- 60% reduction in context switching time
- 10+ hours per week per developer across the SDLC

CUSTOMERS INCLUDE: MongoDB, Zapier, Empower, Nav, Podium
