

# FeedbackFruits Interactive Document

## Why activate the process of reviewing study material?

#### For students (didactic)

- → Fits with a more flipped classroom setting
- → Promotes independent learning
- Increases deeper learning+ enhances understanding

### For teachers (pragmatic)

- Lectures become 'fun' again once students are prepared & actively participate
- Easy questions answered by students, difficult questions addressed in class
- "Heatmap" of learning objectives reduces lecture preparation time (instructor)

## How to activate the review process of study material?

Annotations possibility for study material

Discussion threads/ social learning

Formative test questions (preferably in-line)

Learning analytics

Different study material formats (video/documents/ audio)

Group possibilities

Extensive grading options

## What was developed for activating study material?

# Interactive Study Material

Pedagogic challenge: Passive consumption of study material

## Comprehension

Pedagogic challenge: Inefficient reading strategies of students

#### Inline annotations on:

- → Text
- → Audio fragments
- → Video fragments

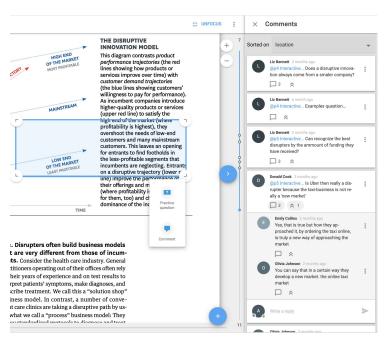

We know from other research that people will sometimes come to a conclusion for emotional reasons (identity, ideology) and then rationalize that belief, citing evidence or arguments that were not the real reason for their belief in the first place. They will also resist changing their position, even in the face of solid evidence, if their belief is emotionally held.

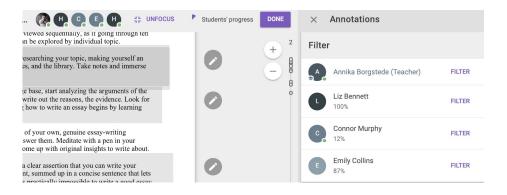

Social learning through students commenting on each others annotations

Let students learn from each other by allowing them to filter on peer input

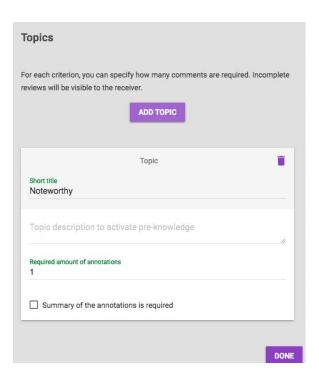

Back

Priming students on topics by:

- → determining topics
- making students annotate per topic
- requiring a summary for each topic (optional)

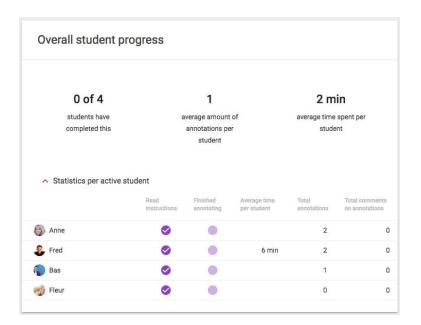

Back

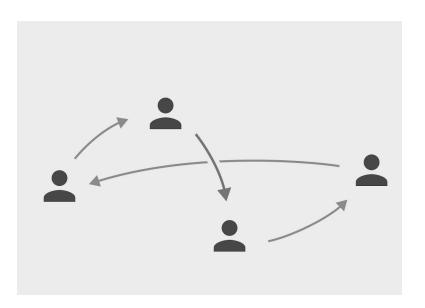

#### Learning analytics through:

- → comments & annotations
- → time spend
- correct answers to practice questions
- → sorting options

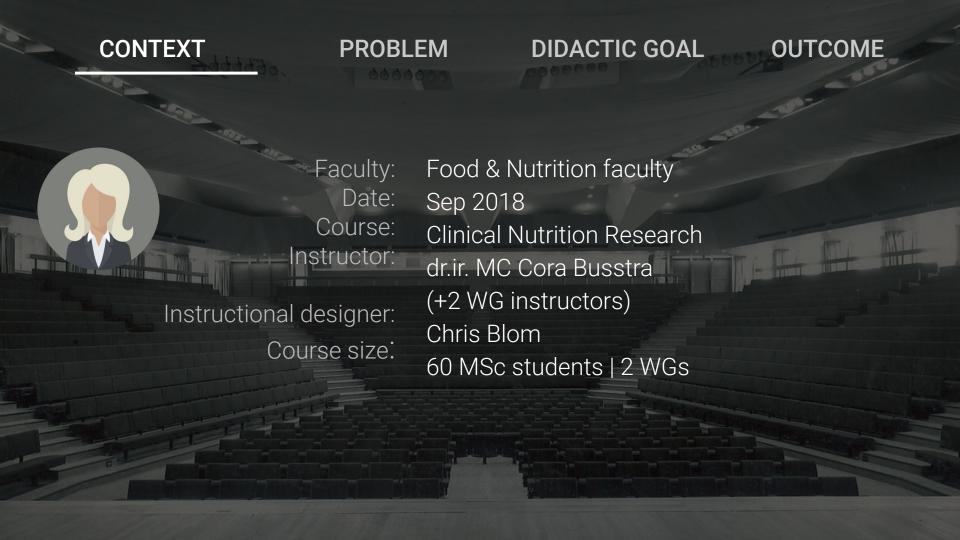

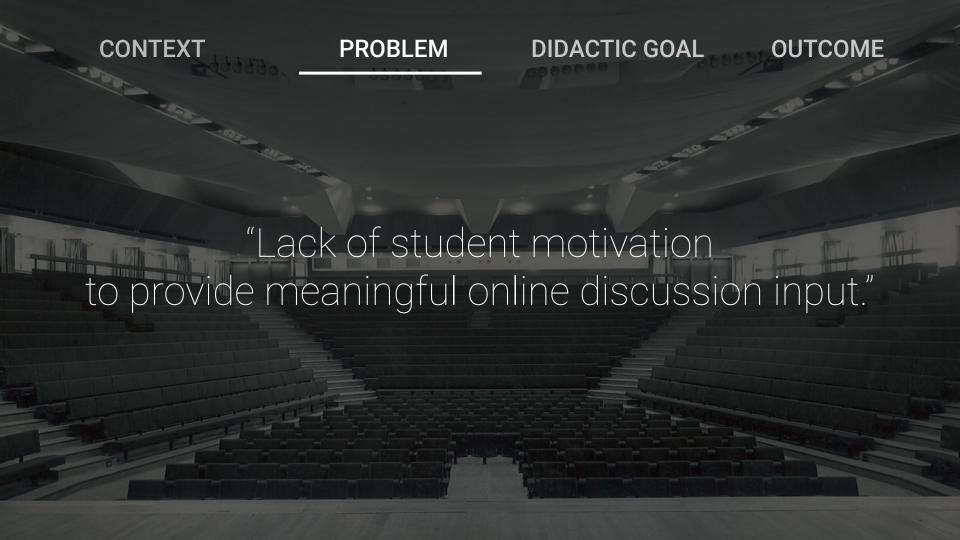

Support of LMS groups through Smaller scale discussions in study material

- 1. Creating a safe learning environment
  - a. Where students can also make mistakes
  - b. Where not all input is being judged by teacher
- 2. Making students responsible for own learning process
  - a. By them critically reviewing their best contributions compared to the rest of the discussion input
  - b. By selecting one comment themselves that will later be reviewed by the teacher
- 3. Organizing discussions as part of a student-centred teaching concept

## Tool used
