Process Automations with Power Automate

- Automation of processes with Power Automate Cloud flows
 - Often used in combinations with Power Apps – either Canvas apps or Model Driven Apps
- Typical processes automated with Power Automate
 - HR processes, e.g. onboarding and offboarding.
 - Document approvals on relation to quality systems or project processes
 - Document signature workflows, using e.g. Adobe Sign
- Quick and easy way to implement notifications for events, or approvals

Fellowmind has experience with a wide range of process automations using Power Automate

Integrations with Power Automate

- Easy system integrations with Power Automate or Logic apps
- With the build in connectors or flexible HTTP connectors, it is possible to build integrations to almost any systems with an API using the low code platform, Power Automate.
- Typical integration scenarios using Power Automate
 - Automatically create Teams or SharePoint sites, based on events from ERP or CRM systems
 - Integrations between Azure Entra ID and HR system

Fellowmind can assist with all your integration needs, using the right tool for the task

RPA with Power Automate

- Power Automate desktop makes integrations with Legacy systems without a usable API possible
- Typical processes
 - Extract invoice data from documents/emails and enter into legacy system
 - Integrations from API based systems to non-API based
- Attended or unattended bots, depending on specific use case

Fellowmind can help you with building the right RPA setup for your needs
