Sustainability at Fellowmind

Today's two mega-trends, digitalization and sustainability go hand in hand. With commitment and determination, tech-enabled sustainability has the ability to solve the environmental and social challenges facing us.

Next to digitalization, sustainability is one of the top priorities of most of our customers. We support our customers in their sustainability transition with our technology, business knowledge, passion, and dedication.

We enable customers to record, report, and reduce their environmental impact through automated data connections and actionable insights.

Sustainability offering

Sustainability is at the core of our customers' strategy. Within Fellowmind, we are committed to helping our customers on their digital journey and supporting them in their transition toward becoming more sustainable.

With our customers, we work on environmental, social, and governance (ESG) impacts. For specific measurement metrics, we use Microsoft's Cloud for Sustainability, which helps to record, report, and reduce your organization's impact through automated data connections and actionable insights.

We establish direct connections to emission sources and operational business activities to get a clear picture in near real-time. We align and centralize your data using a common data model so that it's easier to calculate, understand, and report on your business' environmental, social, and governance impacts.

Western Europe
Partner Pledge

Microsoft

As a Microsoft partner, Fellowmind has signed the Microsoft Partner Pledge. The pledge is about encouraging and supporting the adoption of technologies in a deep and ethical way and ensure everyone possesses the right skills and opportunities to make the most of what lies ahead.
