

What our customers are saying

With the help of Ferrum, we've seen a 30% higher cancer detection rate and a 10% reduction in recall rates, minimizing patient anxiety and unnecessary testing. It's a win-win for Sutter and our patients.

About Ferrum Health:

Ferrum Health is a secure, enterprise AI deployment engine, designed to help health systems discover, validate, and deploy clinical AI tools at scale. Unlike AI developers that create algorithms, Ferrum acts as a secure deployment platform, ensuring that AI findings are integrated, validated, and supported within a hospital's existing infrastructure. Ferrum provides end-to-end support, handling everything from AI selection to deployment and ongoing maintenance, reducing the burden on hospital IT teams.

Why Does It Matter?

Ferrum Health is not an AI developer but an AI deployment partner, ensuring hospitals can scale AI securely and efficiently—without the technical and operational AI governance burden.

The Result? A trusted, secure, and scalable AI governance engine that helps hospitals adopt AI with confidence while keeping patient data protected.
